Acknowledgements

International IDEA would like to thank everyone who has been involved in the production of the Global State of Democracy Indices. The Indices have benefited from the contributions of many individuals at International IDEA, and from the expert input of members of the Institute's partner organizations. In particular, thanks to Mélida Jiménez, Victoria Perotti, Lina Antara and Joseph Noonan, Svend-Erik Skaaning and Claudiu D. Tufis for their contributions to the development of the Global State of Democracy Indices, and to the members of the Expert Advisory Board for their review of this methodology and related documentation.

Methodology and data set development (Global State of Democracy Indices)

Svend-Erik Skaaning, Professor at the Department of Political Science at Aarhus University, Project Manager, Varieties of Democracy (V-Dem) project

Claudiu D. Tufis, Associate Professor, University of Bucharest, Political Science Department

Expert Advisory Board (Global State of Democracy Indices)

Michael Bernhard, Raymond and Miriam Ehrlich Chair, Professor at the Department of Political Science at the University of Florida

Michael Coppedge, Professor at the Department of Political Science and Faculty Fellow at the Kellogg Institute of International Studies at the University of Notre Dame, Co-Principal Investigator of the V-Dem project

Carl-Henrik Knutsen, Professor at the Department of Political Science at the University of Oslo, Co-Principal Investigator of the V-Dem project

Staffan Lindberg, Professor at the Department of Political Science at the University of Gothenburg, Director of the V-Dem Institute

Gerardo Munck, Professor at the School of International Relations at the University of Southern California

About this document

The Global State of Democracy Indices Codebook, Version 2 is the third in a series of documents prepared by International IDEA to present the Global State of Democracy (GSoD) Indices. The Codebook presents information about all the variables included in the dataset: identifying variables, attributes of democracy, subattributes, sub-components and indicators. The other two documents are *The Global State of Democracy Indices Methodology: Conceptualization and Measurement Framework, Version 2* (Skaaning 2018), which presents the theoretical framework that guided the construction of the Indices, and *The Global State of Democracy Indices: Technical Procedures Guide, Version 2* (Tufis 2018), which outlines the technical aspects of constructing the Indices.

Version 2 of the GSoD Indices depicts democratic trends at the country, regional and global levels across a broad range of different attributes of democracy in the period 1975–2017 but does not provide a single index of democracy. The Indices produce data for 158 countries. The data underlying the Indices is based on a total of 97 indicators developed by various scholars and organizations using different types of source, including expert surveys, standards-based coding by research groups and analysts, observational data and composite measures.

The Global State of Democracy is a biennial report that aims to provide policymakers with an evidence-based analysis of the state of global democracy, supported by the GSoD Indices, in order to inform policy interventions and identify problem-solving approaches to trends affecting the quality of democracy around the world. The first edition of the report (International IDEA 2017), explored the conditions under which democracy can be resilient and how to strengthen its capacity as a system to overcome challenges and threats.

Version 2 of the GSoD Indices can be accessed online:
<<http://www.idea.int/gsod-indices>>

Introduction

The Global State of Democracy Indices Codebook, Version 2 is the third in a series of documents prepared by International IDEA to present the Global State of Democracy (GSoD) Indices. The Codebook presents information about all the variables included in the dataset: identifying variables, attributes of democracy, subattributes, sub-components and indicators. The other two documents are *The Global State of Democracy Indices Methodology: Conceptualization and Measurement Framework, Version 2* (Skaaning 2018), which presents the theoretical framework that guided the construction of the Indices, and *The Global State of Democracy Indices: Technical Procedures Guide, Version 2* (Tufis 2018), which outlines the technical aspects of constructing the Indices.

The main objective of the GSoD Indices is to provide systematic data that captures trends at the global, regional and national levels for different aspects of International IDEA's comprehensive understanding of democracy. The Indices turn a broad range of empirical indicators from various datasets into measures of different aspects of democracy that can be used to evaluate the state of democracy at the global, regional and national levels. They can also assist policymakers, researchers and civil society actors in their analyses of trends related to different aspects of democracy and identification of priority policy areas.

The GSoD Indices, which were constructed for the first time in 2017 and updated in 2018, cover the 158 independent countries with more than one million inhabitants in the period 1975 to 2017. They are composite measures based on 97 indicators from different kinds of extant data sources. These indicators are assigned to the different subattributes of the conceptual framework and combined in the GSoD Indices.

The GSoD Indices have been produced by a team of International IDEA staff and two external experts. The construction of the GSoD Indices was supervised by an expert advisory board consisting of five leading experts in the field of democracy measurement. Careful justification and documentation of the conceptual distinctions and methodological choices made as well as the use of state-of-the-art procedures were emphasized at all stages in the construction of the Indices. This was done to ensure consistency and transparency, as well as high levels of measurement validity and reliability.

The main section of the Codebook is devoted to presenting information about all the variables included in the dataset. The identifying variables are presented first. The attributes, subattributes, sub-components and indicators are then presented, grouped by attribute of democracy. Within each attribute, the variables are presented from the highest to the lowest level of aggregation, which means that the attributes are presented first, followed by the corresponding subattributes, the corresponding sub-components (only in the case of the second attribute, fundamental rights) and finally the corresponding indicators.

Identifying variables

ID Country Year (ID_country_year)

Original variable	Constructed variable
GSoD name	ID_country_year
Definition	This is an identification variable, which uniquely identifies each combination of country and year (the country-year) in the data set. It has been constructed by concatenating the Correlates of War country code (COWcode) and the year, so that the last four digits of the variable always indicate the year, while the remaining one to three digits preceding the year represent the COWcode.

ID Country Name (ID_country_name)

Original variable	Constructed variable
GSoD name	ID_country_name
Definition	This is an identification variable, which uniquely identifies each of the 158 countries in the data set. The values this variable takes are the names of the countries included in the data set.
Countries	Afghanistan, Albania, Algeria, Angola, Argentina, Armenia, Australia, Austria, Azerbaijan, Bahrain, Bangladesh, Belarus, Belgium, Benin, Bolivia, Bosnia and Herzegovina, Botswana, Brazil, Bulgaria, Burkina Faso, Burundi, Cambodia, Cameroon, Canada, Central African Republic, Chad, Chile, China, Colombia, Democratic Republic of the Congo (DRC), Costa Rica, Côte d'Ivoire, Croatia, Cuba, Cyprus, Czechia, Denmark, Dominican Republic, Ecuador, Egypt, El Salvador, Equatorial Guinea, Eritrea, Estonia, Ethiopia, Finland, France, Gabon, Gambia, Georgia, German Democratic Republic, Germany, Ghana, Greece, Guatemala, Guinea, Guinea-Bissau, Haiti, Honduras, Hungary, India, Indonesia, Iran, Iraq, Ireland, Israel, Italy, Jamaica, Japan, Jordan, Kazakhstan, Kenya, Kosovo, Kuwait, Kyrgyzstan, Laos, Latvia, Lebanon, Lesotho, Liberia, Libya, Lithuania, Macedonia, Madagascar, Malawi, Malaysia, Mali, Mauritania, Mauritius, Mexico, Moldova, Mongolia, Morocco, Mozambique, Myanmar, Namibia, Nepal, the Netherlands, New Zealand, Nicaragua, Niger, Nigeria, North Korea, Norway, Oman, Pakistan, Panama, Papua New Guinea, Paraguay, Peru, Philippines, Poland, Portugal, Qatar, Republic of Congo, Romania, Russia, Rwanda, Saudi Arabia, Senegal, Serbia, Sierra Leone, Singapore, Slovakia, Slovenia, Somalia, South Africa, South Korea, South Sudan, Spain, Sri Lanka, Sudan, Swaziland, Sweden, Switzerland, Syria, Taiwan, Tajikistan, Tanzania, Thailand, Timor-Leste, Togo, Trinidad and Tobago, Tunisia, Turkey, Turkmenistan, Uganda, Ukraine, United Arab Emirates, United Kingdom, United States, Uruguay, Uzbekistan, Venezuela, Viet Nam, Yemen, Zambia, Zimbabwe

ID Country Code (ID_country_code)

Original variable	Constructed variable
GSoD name	ID_country_code
Definition	This is an identification variable, which uniquely identifies each of the 158 countries in the data set. The values this variable takes are the Correlates of War country code (COWcode).

ID Year (ID_year)

Original variable	Constructed variable
GSoD name	ID_year
Definition	This is an identification variable, which uniquely identifies each of the 43 years included in the data set (from 1975 to 2017).

ID Region (ID_region)

Original variable	Constructed variable
GSoD name	ID_Region
Definition	This is an identification variable, which uniquely identifies each of the six regions in the data set. The values this variable takes are the names of the regions included in the data set. For more details see Tufis (2017).
Regions	Africa, Latin America and the Caribbean, North America, Asia and the Pacific, Middle East and Iran, Europe

ID Subregion (ID_subregion)

Original variable	Constructed variable
GSoD name	ID_subregion
Definition	This is an identification variable, which uniquely identifies each of the 17 subregions in the data set. The values this variable takes are the names of the regions included in the data set. For more details see Tufis (2018).
Subregions	East Africa, Central Africa, Southern Africa, West Africa, North Africa, Caribbean, Central America and Mexico, South America, Central Asia, East Asia, South Asia, South East Asia, Oceania, East-Central Europe, Eastern Europe/Post-Soviet Europe, North and West Europe, South Europe

1. Representative Government

Representative Government is the first of the five attributes of democracy developed for International IDEA's Global State of Democracy Indices. This section of the Codebook provides details about the subattributes and indicators that comprise the index of Representative Government.

1 attribute

- Representative Government

4 subattributes

- Clean elections
- Inclusive suffrage
- Free political parties
- Elected government

18 indicators

Attribute

Representative Government (C_A1)

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_A1																				
Definition	The representative government attribute emphasizes contested and inclusive popular elections for legislative and executive offices. This attribute distinguishes among four subattributes. Three of them (clean elections, free political parties and elected government) have been aggregated into a contestation index using Bayesian factor analysis (BFA). The representative government index is obtained by multiplying the contestation index by the fourth subattribute, inclusive suffrage.																				
Original scale	Interval																				
Citation	Skaaning (2018)																				
Data manipulation for aggregation	Coded as 0 if the electoral regime (v2x_elecreg from V-Dem) is coded as 0, indicating the absence of regularly scheduled elections as stipulated by election law or well-established precedent.																				
Indicator of	---																				
Aggregation	---																				
Indicators included	C_SD11, C_SD12, C_SD13, C_SD14																				
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score)																				
Auxiliary variables	L_A1 = lower bound for the 68% confidence interval U_A1 = upper bound for the 68% confidence interval																				
Coverage	<table border="1"> <caption>Approximate data for Coverage Chart</caption> <thead> <tr> <th>Year</th> <th>Number of Countries Covered</th> </tr> </thead> <tbody> <tr><td>1975</td><td>130</td></tr> <tr><td>1980</td><td>130</td></tr> <tr><td>1985</td><td>130</td></tr> <tr><td>1990</td><td>135</td></tr> <tr><td>1995</td><td>150</td></tr> <tr><td>2000</td><td>150</td></tr> <tr><td>2005</td><td>150</td></tr> <tr><td>2010</td><td>150</td></tr> <tr><td>2015</td><td>150</td></tr> </tbody> </table>	Year	Number of Countries Covered	1975	130	1980	130	1985	130	1990	135	1995	150	2000	150	2005	150	2010	150	2015	150

2005	150																				
2010	150																				
2015	150																				

Subattributes

Clean Elections (C_SD11)

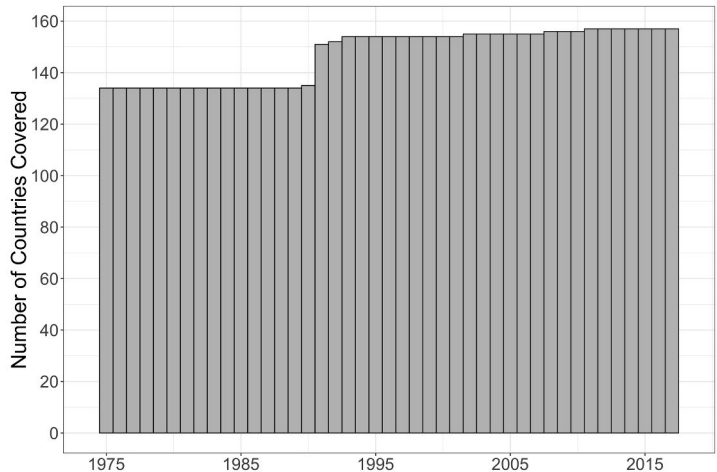

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_SD11																				
Definition	The clean elections subattribute denotes the extent to which elections for national, representative political office are free from irregularities. All of the selected indicators tap into the quality of elections. Two of the indicators reflect free elections more generally, whereas the other indicators capture more specific aspects of this feature, such as irregularities in voter registration and government intimidation. The six indicators have been aggregated into the clean elections subattribute using BFA.																				
Original scale	Interval																				
Citation	Skaaning (2018)																				
Data manipulation for aggregation	Coded as 0 if the electoral regime (v2x_elecreg from V-Dem) is coded as 0, indicating the absence of regularly scheduled elections as stipulated by election law or well-established precedent.																				
Indicator of	1. Representative Government																				
Aggregation	BFA of 1.1. clean elections, 1.3. free political parties and 1.4. elected government to create a contestation index. Thereafter multiplication of contestation index and 1.2. inclusive suffrage.																				
Indicators included	V_11_01, V_11_02, V_11_03, V_11_04, V_11_05, V_11_06																				
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score)																				
Auxiliary variables	L_SD11 = lower bound for the 68% confidence interval U_SD11 = upper bound for the 68% confidence interval																				
Coverage	<table border="1"> <caption>Approximate data for Clean Elections Coverage (Number of Countries Covered)</caption> <thead> <tr> <th>Year</th> <th>Number of Countries Covered</th> </tr> </thead> <tbody> <tr><td>1975</td><td>135</td></tr> <tr><td>1980</td><td>135</td></tr> <tr><td>1985</td><td>135</td></tr> <tr><td>1990</td><td>135</td></tr> <tr><td>1995</td><td>150</td></tr> <tr><td>2000</td><td>150</td></tr> <tr><td>2005</td><td>150</td></tr> <tr><td>2010</td><td>150</td></tr> <tr><td>2015</td><td>150</td></tr> </tbody> </table>	Year	Number of Countries Covered	1975	135	1980	135	1985	135	1990	135	1995	150	2000	150	2005	150	2010	150	2015	150
Year	Number of Countries Covered																				
1975	135																				
1980	135																				
1985	135																				
1990	135																				
1995	150																				
2000	150																				
2005	150																				
2010	150																				
2015	150																				

Inclusive Suffrage (C_SD12)

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_SD12																				
Definition	The inclusive suffrage subattribute denotes the extent to which adult citizens have equal and universal passive and active voting rights.																				
Original scale	Interval																				
Citation	Skaaning (2018)																				
Data manipulation for aggregation	Coded as 0 if the electoral regime (v2x_electreg from V-Dem) is coded as 0, indicating the absence of regularly scheduled elections as stipulated by election law or well-established precedent.																				
Indicator of	1. Representative Government																				
Aggregation	Weighted average of the two variables, with suffrage counting twice as much as voter registration. Thereafter multiplication with the contestation index.																				
Indicators included	V_12_01, V_12_02																				
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score)																				
Auxiliary variables	L_SD11 = lower bound for the 68% confidence interval U_SD11 = upper bound for the 68% confidence interval																				
Coverage	<table border="1"> <caption>Approximate data for Coverage Chart</caption> <thead> <tr> <th>Year</th> <th>Number of Countries Covered</th> </tr> </thead> <tbody> <tr><td>1975</td><td>130</td></tr> <tr><td>1980</td><td>130</td></tr> <tr><td>1985</td><td>130</td></tr> <tr><td>1990</td><td>130</td></tr> <tr><td>1995</td><td>150</td></tr> <tr><td>2000</td><td>150</td></tr> <tr><td>2005</td><td>150</td></tr> <tr><td>2010</td><td>155</td></tr> <tr><td>2015</td><td>155</td></tr> </tbody> </table>	Year	Number of Countries Covered	1975	130	1980	130	1985	130	1990	130	1995	150	2000	150	2005	150	2010	155	2015	155

1985	130																				
1990	130																				
1995	150																				
2000	150																				
2005	150																				
2010	155																				
2015	155																				

Free Political Parties (C_SD13)

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_SD13																				
Definition	The free political parties subattribute denotes the extent to which political parties are free to form and campaign for political office. Six indicators, partly based on expert surveys and partly in-house coded, are used to measure how free political parties are. All of them reflect whether political parties generally, and opposition parties in particular, are allowed to organize freely and run in elections. The six indicators have been aggregated into the free political parties subattribute using item response theory (IRT).																				
Original scale	Interval																				
Citation	Skaaning (2018)																				
Data manipulation for aggregation	---																				
Indicator of	1. Representative Government																				
Aggregation	BFA of 1.1. clean elections, 1.3. free political parties and 1.4. elected government to create a contestation index. Thereafter multiplication of contestation index and 1.2. inclusive suffrage.																				
Indicators included	V_13_01, V_13_02, V_13_03, V_13_04, V_13_05, V_13_06																				
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).																				
Auxiliary variables	L_SD13 = lower bound for the 68% confidence interval U_SD13 = upper bound for the 68% confidence interval																				
Coverage	 <table border="1"> <caption>Approximate data for Coverage Chart</caption> <thead> <tr> <th>Year</th> <th>Number of Countries Covered</th> </tr> </thead> <tbody> <tr><td>1975</td><td>135</td></tr> <tr><td>1980</td><td>135</td></tr> <tr><td>1985</td><td>135</td></tr> <tr><td>1990</td><td>135</td></tr> <tr><td>1995</td><td>155</td></tr> <tr><td>2000</td><td>155</td></tr> <tr><td>2005</td><td>155</td></tr> <tr><td>2010</td><td>155</td></tr> <tr><td>2015</td><td>155</td></tr> </tbody> </table>	Year	Number of Countries Covered	1975	135	1980	135	1985	135	1990	135	1995	155	2000	155	2005	155	2010	155	2015	155

Elected Government (C_SD14)

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_SD14																				
Definition	The elected government subattribute denotes the extent to which national, representative government offices are filled through elections. It is operationalized using four indicators from V-Dem, BBRD and Polity. All the indicators have a rather formal focus, which means that they do not assess the quality of elections or fully capture the extent to which reserved domains and undue influence from non-elected groups might in practice restrict elected officials' effective power to govern. The four indicators were aggregated into the elected government subattribute using IRT.																				
Original scale	Interval																				
Citation	Skaaning (2018)																				
Data manipulation for aggregation	---																				
Indicator of	1. Representative Government																				
Aggregation	BFA of 1.1. clean elections, 1.3. free political parties and 1.4. elected government to create a contestation index. Thereafter multiplication of contestation index and 1.2. inclusive suffrage.																				
Indicators included	V_14_01, V_14_02, V_14_03, V_14_04																				
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).																				
Auxiliary variables	L_SD14 = lower bound for the 68% confidence interval U_SD14 = upper bound for the 68% confidence interval

Indicators

EMB autonomy (v_11_01)

Data source	V-Dem																				
Original variable	vzelembaut																				
GSoD name	v_11_01																				
Definition	<p>Question: Does the Election Management Body (EMB) have autonomy from government to apply election laws and administrative rules impartially in national elections?</p> <p>Responses:</p> <p>0: No. The EMB is controlled by the incumbent government, the military or another de facto ruling body.</p> <p>1: Somewhat. The EMB has some autonomy on some issues but on critical issues that influence the outcome of elections, the EMB is partial towards the de facto ruling body.</p> <p>2: Ambiguous. The EMB has some autonomy but is also partial and it is unclear to what extent this influences the outcome of the election.</p> <p>3: Almost. The EMB has autonomy and acts impartially almost all the time. It may be influenced by the de facto ruling body in some minor ways that do not influence the outcome of elections.</p> <p>4: Yes. The EMB is autonomous and impartially applies elections law and administrative rules.</p> <p>Clarification: The EMB refers to whatever body (or bodies) is charged with administering national elections.</p>																				
Original scale	Ordinal, converted to interval by the measurement model.																				
Citation	Pemstein et al. (2018) Coppedge et al. (2018: 53)																				
Data manipulation for aggregation	Coded as 0 if the electoral regime (v2x_elecreg from V-Dem) is coded as 0, indicating the absence of regularly scheduled elections as stipulated by election law or well-established precedent.																				
Indicator of	1. Representative Government 1.1. Clean elections																				
Aggregation	BFA to construct subattribute 1.1. Clean elections.																				
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).																				
Coverage	<table border="1"> <caption>Number of Countries Covered (Estimated from Chart)</caption> <thead> <tr> <th>Year</th> <th>Number of Countries Covered</th> </tr> </thead> <tbody> <tr><td>1975</td><td>135</td></tr> <tr><td>1980</td><td>135</td></tr> <tr><td>1985</td><td>135</td></tr> <tr><td>1990</td><td>135</td></tr> <tr><td>1995</td><td>155</td></tr> <tr><td>2000</td><td>155</td></tr> <tr><td>2005</td><td>155</td></tr> <tr><td>2010</td><td>155</td></tr> <tr><td>2015</td><td>155</td></tr> </tbody> </table>	Year	Number of Countries Covered	1975	135	1980	135	1985	135	1990	135	1995	155	2000	155	2005	155	2010	155	2015	155
Year	Number of Countries Covered																				
1975	135																				
1980	135																				
1985	135

2010	155																				
2015	155																				

EMB capacity (v_11_02)

Data source	V-Dem																				
Original variable	v2elembcap																				
GSoD name	v_11_02																				
Definition	<p>Question: Does the Election Management Body (EMB) have sufficient staff and resources to administer a well-run national election?</p> <p>Responses:</p> <p>0: No. There are glaring deficits in staff, financial, or other resources affecting the organization across the territory.</p> <p>1: Not really. Deficits are not glaring but they nonetheless seriously compromised the organization of administratively well-run elections in many parts of the country.</p> <p>2: Ambiguous. There might be serious deficiencies compromising the organization of the election but it could also be a product of human errors and co-incidence or other factors outside the control of the EMB.</p> <p>3: Mostly. There are partial deficits in resources but these are neither serious nor widespread.</p> <p>4: Yes. The EMB has adequate staff and other resources to administer a well-run election.</p> <p>Clarification: The EMB refers to whatever body (or bodies) is charged with administering national elections.</p>																				
Original scale	Ordinal, converted to interval by the measurement model.

Election other voting irregularities (v_11_03)

Data source	V-Dem																				
Original variable	v2elirreg																				
GSoD name	v_11_03																				
Definition	<p>Question: In this national election, was there evidence of other intentional irregularities by incumbent and/or opposition parties and/or vote fraud?</p> <p>Responses:</p> <p>0: Yes. There were systematic and almost nationwide other irregularities.</p> <p>1: Yes, some. There were non-systematic, but fairly common other irregularities, even if only in some parts of the country.</p> <p>2: Sporadic. There were a limited number of sporadic other irregularities and it is not clear whether they were intentional or disadvantaged particular groups.</p> <p>3: Almost none. There were only a limited number of irregularities and many were probably unintentional or did not disadvantage particular groups' access to participation.</p> <p>4: None. There was no evidence of intentional other irregularities. Unintentional irregularities resulting from human error and/or natural conditions may still have occurred.</p> <p>Clarification: Examples include use of double IDs, intentional lack of voting materials, ballot-stuffing, misreporting of votes and false collation of votes. This question does not refer to lack of access to registration, harassment of opposition parties, manipulations of the voter registry or vote-buying (dealt with in previous questions).</p>																				
Original scale	Ordinal, converted to interval by the measurement model.																				
Citation	Pemstein et al. (2018) Coppedge et al. (2018: 57)																				
Data manipulation for aggregation	Repeated within elections: values for non-election years are copied from the previous election year. Coded as 0 if the electoral regime (v2x_elecereg from V-Dem) is coded as 0, indicating the absence of regularly scheduled elections as stipulated by election law or well-established precedent.																				
Indicator of	1. Representative Government 1.1. Clean elections																				
Aggregation	BFA to construct subattribute 1.1. Clean elections.																				
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).

Election government intimidation (v_11_04)

Data source	V-Dem																				
Original variable	v2elintim																				
GSoD name	v_11_04																				
Definition	<p>Question: In this national election, were opposition candidates/parties/campaign workers subjected to repression, intimidation, violence or harassment by the government, the ruling party or their agents?</p> <p>Responses:</p> <p>0: Yes. The repression and intimidation by the government or its agents was so strong that the entire period was quiet.</p> <p>1: Yes, frequent: There was systematic, frequent and violent harassment and intimidation of the opposition by the government or its agents during the election period.</p> <p>2: Yes, some. There was periodic, not systematic but possibly centrally coordinated harassment and intimidation of the opposition by the government or its agents.</p> <p>3: Restrained. There were sporadic instances of violent harassment and intimidation by the government or its agents, in at least one part of the country and directed at only one or two local branches of opposition groups.</p> <p>4: None. There was no harassment or intimidation of opposition by the government or its agents throughout the election campaign period and polling day.</p> <p>Clarification: Other types of clearly distinguishable civil violence, even if politically motivated, during the election period should not be factored in when scoring this indicator (it is dealt with separately).</p>

Election free and fair (v_11_05)

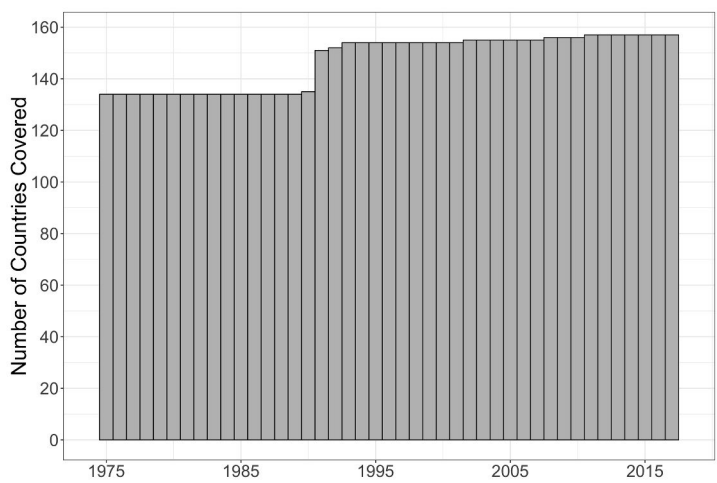

Data source	V-Dem																				
Original variable	v2elfrfair																				
GSoD name	v_11_05																				
Definition	<p>Question: Taking all aspects of the pre-election period, election day and the post-election process into account, would you consider this national election to be free and fair?</p> <p>Responses:</p> <p>0: No, not at all. The elections were fundamentally flawed and the official results had little if anything to do with the 'will of the people' (i.e. who became president or who won the legislative majority).</p> <p>1: Not really. While the elections allowed for some competition, the irregularities in the end affected the outcome of the election (as defined above).</p> <p>2: Ambiguous. There was substantial competition and freedom of participation but there were also significant irregularities. It is hard to determine whether the irregularities affected the outcome or not (as defined above).</p> <p>3: Yes, somewhat. There were deficiencies and some degree of fraud and irregularity but these did not in the end affect the outcome (as defined above).</p> <p>4: Yes. There was some amount of human error and some logistical restrictions but these were largely unintentional and without significant consequences.</p> <p>Clarification: The only thing that should not be considered in coding this is the extent of suffrage (by law). Thus, a free and fair election may occur even if the law excludes significant groups (an issue measured separately).</p>

Competition (v_11_06)

Data source	LIED																				
Original variable	competitive elections																				
GSoD name	v_11_06																				
Definition	The chief executive offices and seats in the effective legislative body are filled using elections that are characterized by uncertainty, meaning that the elections are, in principle, sufficiently free to enable the opposition to gain power if they were to attract sufficient support from the electorate. This presumes that control over key executive and legislative offices is determined by elections, the executive and members of the legislature have not been unconstitutionally removed and the legislature has not been dissolved. With respect to the electoral process, this presumes that the constitutional timing of elections has not been violated (in more than a marginal fashion), non-extremist parties are not banned, opposition candidates are generally free to participate, voters experience little systematic coercion in exercising their electoral choice and electoral fraud does not determine who wins. With respect to the outcome, this presumes that the declared winner of executive and legislative elections reflects the votes cast by the electorate, as near as can be determined from extant sources. Incumbent turnover (as a result of multiparty elections) is regarded as a strong indicator of competition but is neither necessary nor sufficient. In addition, reports from outside observers (as reported in books, articles and country reports) are used to determine whether the above-mentioned conditions have been met in a given election. Coding for this variable does <i>not</i> take into account whether there is a level playing field, all contestants gain access to funding and the media, media coverage is unbiased, civil liberties are respected or other features associated with fully free and fair elections are present. Competition therefore sets a modest threshold.																				
Original scale	Nominal

Inclusive suffrage (v_12_01)

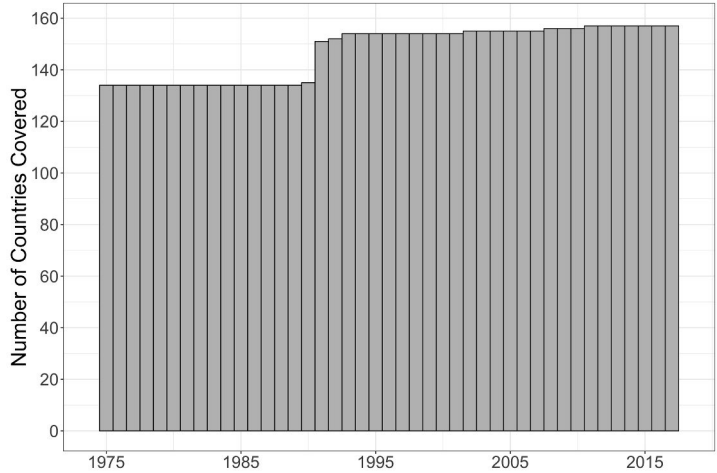

Data source	V-Dem																				
Original variable	v2elsuffrage																				
GSoD name	v_12_01																				
Definition	<p>Question: What percentage (%) of adult citizens (as defined by statute) has the legal right to vote in national elections?</p> <p>Responses: Per cent.</p> <p>Clarification: This question does not take into consideration restrictions based on age, residence, having been convicted for crime, or being legally incompetent. It covers legal (de jure) restrictions, not restrictions that may be operative in practice (de facto). The adult population (as defined by statute) is defined by citizens in the case of independent countries or the people living in the territorial entity in the case of colonies. Universal suffrage is coded as 100. The scores reflect de jure provisions of suffrage extension in percentage of the adult population. If the suffrage law is revised in a way that affects the extension, the scores reflect this change as of the calendar year the law was enacted.</p>																				
Original scale	0% to 100%.																				
Citation	Coppedge et al. (2018: 80)																				
Data manipulation for aggregation	Coded as 0 if the electoral regime (v2x_elecreg from V-Dem) is coded as 0, indicating the absence of regularly scheduled elections, as stipulated by election law or well-established precedent.																				
Indicator of	1. Representative Government																				
Aggregation	Weighted average to construct subattribute 1.2 Inclusive suffrage.																				
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).

Elections multiparty (v_13_04)

Data source	V-Dem																				
Original variable	v2elmulpar																				
GSoD name	v_13_04																				
Definition	<p>Question: Was this national election multiparty?</p> <p>Responses:</p> <p>0: No. No-party or single-party and there is no meaningful competition (includes situations where a few political parties are legal but they are all de facto controlled by the dominant party).</p> <p>1: Not really. No-party or single-party (defined as above) but multiple candidates from the same party and/or independents contest legislative seats or the presidency.</p> <p>2: Constrained. At least one real opposition party is allowed to contest but competition is highly constrained, either legally or informally.</p> <p>3: Almost. Elections are multiparty in principle but either one main opposition party is prevented (<i>de jure</i> or <i>de facto</i>) from contesting, or conditions such as civil unrest (excluding natural disasters) prevent competition in a portion of the territory.</p> <p>4: Yes. Elections are multiparty, even though a few marginal parties may not be permitted to contest (e.g. far-right/left extremist parties, or anti-democratic religious or ethnic parties).</p>																				
Original scale	Ordinal, converted to interval by the measurement model.																				
Citation	<p>Pemstein et al. (2018)</p> <p>Coppedge et al. (2018: 54)</p>																				
Data manipulation for aggregation	Repeated within elections: values for non-election years are copied from the previous election year. Recoded into 20 categories, each of which contains five percentiles, ranging from 1 (the lowest five percentiles) to 20 (the highest five percentiles). Coded as 0 if the electoral regime (v2x_elecreg from V-Dem) is coded as 0, indicating the absence of regularly scheduled elections as stipulated by election law or established precedent.																				
Indicator of	<p>1. Representative Government</p> <p>1.3. Free political parties</p>

Competitiveness of participation (v_13_05)

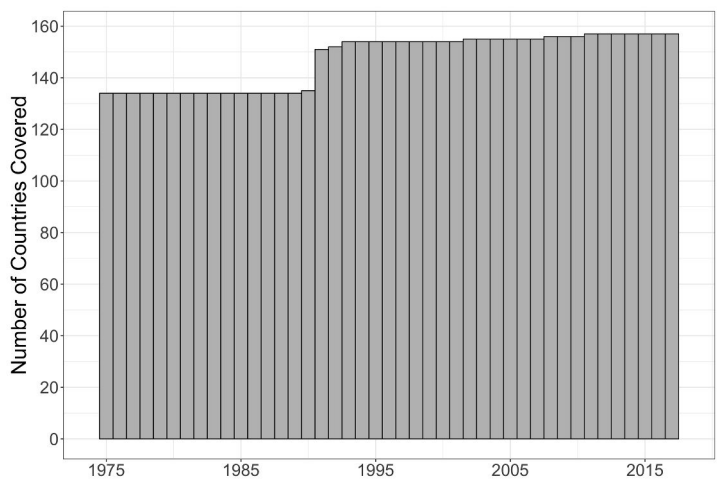

Data source	Polity
Original variable	Parcomp
GSoD name	v_13_05
Definition	<p>The competitiveness of participation refers to the extent to which alternative preferences for policy and leadership can be pursued in the political arena. Political competition implies a significant degree of civil interaction, so polities that are coded unregulated (1) on regulation of participation (PARREG, variable 2.5) are not coded for competitiveness. Polities in transition between unregulated and any of the regulated forms on variable 2.5 also are not coded on variable 2.6.</p> <p>Competitiveness is coded on a five-category scale:</p> <ul style="list-style-type: none"> 0. Not applicable. 1. Repressed. 2. Suppressed. 3. Factional. 4. Transitional. 5. Competitive.
Original scale	Ordinal
Citation	Marshall, Gurr and Jaggers (2016: 28)
Data manipulation for aggregation	Codes -99 to -66 treated as missing values.
Indicator of	<ul style="list-style-type: none"> 1. Representative Government 1.3. Free political parties
Aggregation	IRT to construct subattribute 1.3. Free political parties.
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).
Coverage	 <p>The bar chart illustrates the number of countries covered by the competitiveness of participation variable over time. The vertical axis represents the 'Number of Countries Covered' from 0 to 160 in increments of 20. The horizontal axis represents years from 1975 to 2015 in 10-year increments. The data shows a general upward trend, with coverage starting at approximately 130 countries in 1975, remaining relatively stable until the late 1980s, and then increasing to a peak of about 150 countries by 2015.</p>

Multiparty elections (v_13_06)

Data source	LIED																				
Original variable	multiparty legislative elections																				
GSoD name	v_13_06																				
Definition	<p>Multiparty legislative elections are defined by the existence of two conditions: legislative elections (LEGSELEC) and opposition (OPPOSITION).</p> <p>LEGSELEC: A legislative body issues at least some laws and does not perform executive functions. The lower house (or unicameral chamber) of the legislature is at least partly elected. The legislature has not been closed.</p> <p>OPPOSITION: The lower house (or unicameral chamber) of the legislature is (at least in part) elected by voters facing more than one choice. Specifically, parties are not banned and either more than one party is allowed to compete or elections are nonpartisan (i.e. all the candidates run without party labels).</p>																				
Original scale	Nominal																				
Citation	Skaaning, Gerring and Bartusevicius (2015)																				
Data manipulation for aggregation	Coded as 0 if the electoral regime (v2x_elecreg from V-Dem) is coded as 0, indicating the absence of regularly scheduled elections as stipulated by election law or established precedent.

Elected executive index (v_14_01)

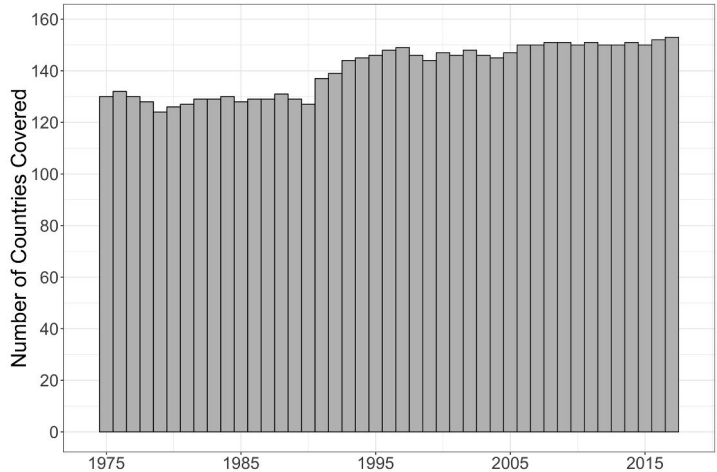

Data source	V-Dem																				
Original variable	v2x_elecoff																				
GSoD name	v_14_01																				
Definition	<p>Question: Are the chief executive and legislature appointed through popular elections?</p> <p>Clarifications: This index attempts to measure whether the chief executive is elected, either directly by popular elections or indirectly by a popularly elected legislature that then appoints the chief executive; and whether, in presidential systems with a directly elected president who is also the chief executive, the legislature is directly elected. Note that a popular election is only minimally defined and also includes sham elections with limited suffrage and no competition. Similarly, 'appointment' by legislature only implies selection and/or approval, not the power to dismiss. This index is useful primarily for aggregating higher-order indices and should not necessarily be interpreted as an important element of democracy in its own right.</p>

Competitiveness of executive recruitment (v_14_02)

Data source	Polity
Original variable	Xrcomp
GSoD name	v_14_02
Definition	<p>Competitiveness refers to the extent that prevailing modes of advancement give subordinates equal opportunities to become superordinates. If power transfers are coded unregulated ('1') in the Regulation of Executive Recruitment (variable 3.1), or involve a transition to/from unregulated, competitiveness is coded 'o'. Three categories are used to measure this concept:</p> <ol style="list-style-type: none"> 1. Selection: Chief executives are determined by hereditary succession, designation or by a combination of both, as in monarchies where the chief minister is chosen by the king or court. Examples of pure designative selection are: rigged, unopposed elections; repeated replacement of presidents before their terms end; recurrent military selection of civilian executives; selection within an institutionalized single party; recurrent incumbent selection of successors; and repeated election boycotts by the major opposition parties. 2. Dual / Transitional: Dual executives occur where one is chosen by hereditary succession, the other by competitive election. Term also used for transitional arrangements between selection (ascription and/or designation) and competitive election. 3. Election: Chief executives are typically chosen in or through competitive elections involving two or more major parties or candidates.
Original scale	Ordinal
Citation	Marshall, Gurr and Jagers (2016: 21)
Data manipulation for aggregation	Codes -99 to -66 treated as missing values. Recoded 0 and 1 as 0, 2 as 0.5, and 3 as 1.
Indicator of	1. Representative Government 1.4. Elected government
Aggregation	IRT to construct subattribute 1.4. Elected government.
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).
Coverage	<p>The bar chart displays the number of countries covered by the data over time. The vertical axis (y-axis) is labeled 'Number of Countries Covered' and ranges from 0 to 160 in increments of 20. The horizontal axis (x-axis) shows years from 1975 to 2015, with major ticks every 10 years (1975, 1985, 1995, 2005, 2015). The bars represent the number of countries covered for each year. The coverage starts at approximately 130 in 1975, remains relatively stable until the mid-1980s, then shows a steady upward trend, reaching approximately 150 by 2015.</p>

Openness of executive recruitment (v_14_03)

Data source	Polity
Original variable	Xopen
GSoD name	v_14_03
Definition	<p>Recruitment of the chief executive is 'open' to the extent that all the politically active population has an opportunity, in principle, to attain the position through a regularized process. If power transfers are coded unregulated (1) in Regulation of Executive Recruitment (variable 3.1) or involve a transition to/from unregulated, openness is coded 0. Four categories are used:</p> <ol style="list-style-type: none"> 1. Closed: Chief executives are determined by hereditary succession, e.g. kings, emperors, emirs, who assume executive power by right of descent. An executive selected by other means may proclaim himself a monarch but the polity he governs is not coded 'closed' unless a relative succeeds him as ruler. 2. Dual Executive-Designation: Hereditary succession plus executive or court selection of an effective chief minister. 3. Dual Executive-Election: Hereditary succession plus electoral selection of an effective chief minister. 4. Open: Chief executives are chosen by elite designation, competitive election or transitional arrangements between designation and election.
Original scale	Ordinal
Citation	Marshall, Gurr and Jaggers (2016: 22)
Data manipulation for aggregation	Codes -99 to -66 treated as missing values. Recoded 0, 1 and 2 as 0; 3 as 0.5; and 4 as 1.
Indicator of	1. Representative Government 1.4. Elected government
Aggregation	IRT to construct subattribute 1.4. Elected government.
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).
Coverage	 <p>The bar chart displays the number of countries covered for the 'Openness of executive recruitment' indicator over time. The vertical axis (Y-axis) is labeled 'Number of Countries Covered' and ranges from 0 to 160 in increments of 20. The horizontal axis (X-axis) shows years from 1975 to 2015, with major ticks every 10 years (1975, 1985, 1995, 2005, 2015). The bars represent the number of countries covered for each year. The coverage starts at approximately 130 in 1975, remains relatively stable until the mid-1980s, then shows a steady upward trend, reaching a plateau of approximately 150 countries by the mid-2000s and remaining at that level through 2015.</p>

Electoral (v_14_04)

Data source	BRRD																				
Original variable	Electoral																				
GSoD name	v_14_04																				
Definition	Does a country have no regular elections, elections in an effectively one- party state, elections with opposition parties but without an actual chance of government change, or full democracy? Alternative democracy indicator capturing degree of multi-party competition (No elections=0, Single-party elections=1, non-democratic multi-party elections=2, democratic elections= 3).

2. Fundamental Rights

Fundamental Rights is the second of the five attributes of democracy developed for International IDEA's Global State of Democracy Indices.

This section of the Codebook provides details about the subattributes, sub-components and indicators that comprise the index of Fundamental Rights:

1 attribute

- Fundamental Rights

3 subattributes

- Access to justice
- Civil liberties
- Social rights and equality

8 sub-components

- Freedom of expression
- Freedom of association and assembly
- Freedom of religion
- Freedom of movement
- Personal integrity and security
- Social group equality
- Basic welfare
- Gender equality

46 indicators

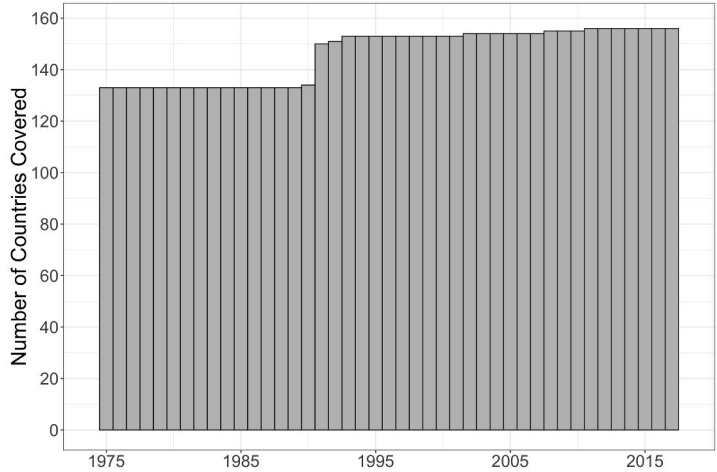

Attribute

Fundamental Rights (C_A2)

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_A2																				
Definition	Fundamental Rights in the form of liberal and social rights support both fair representation and the vertical mechanism of accountability that the first attribute seeks to achieve. This attribute is composed of three subattributes: access to justice, civil liberties, and social rights and equality. The three subattributes were aggregated into the Fundamental Rights index using BFA.

Subattributes

Access to justice (C_SD21)

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_SD21																				
Definition	The access to justice subattribute denotes the extent to which the legal system is fair (i.e., citizens are not subject to arbitrary arrest or detention and have the right to be under the jurisdiction of, and to seek redress from, competent, independent and impartial tribunals without undue delay). It comprises four expert coded variables (V-Dem) that go beyond the independence of courts and an in-house coded CLD measure of the right to a fair trial. The five indicators were aggregated into the access to justice subattribute using BFA.																				
Original scale	Interval																				
Citation	Skaaning (2018)																				
Data manipulation for aggregation	—

Sub-components

Freedom of expression (C_SD22A)

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_SD22A																				
Definition	The freedom of expression sub-component is measured using indicators from V-Dem and CLD. The question underlying the CLD variable is fairly encompassing, whereas the V-Dem variables are more specific and refer to different aspects of media freedom and to the right to openly discuss political issues and express political opinions outside the mass media (two measure freedom of expression, for men and women respectively). The seven indicators were aggregated into the freedom of expression sub-component using BFA.																				
Original scale	Interval																				
Citation	Skaaning (2018)																				
Data manipulation for aggregation	---																				
Indicator of	2. Fundamental Rights 2.2. Civil liberties

Freedom of association and assembly (C_SD22B)

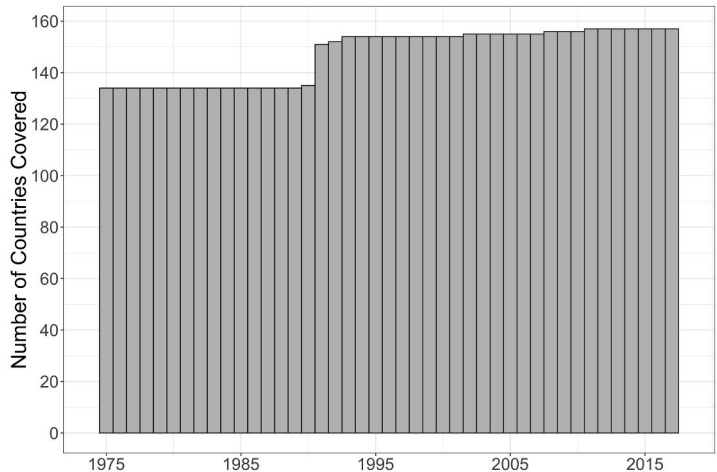

Data source	GSoD Indices
Original variable	Constructed variable
GSoD name	C_SD22B
Definition	Three indicators that directly refer to freedom of association for political and civil groups. These three indicators were aggregated into the freedom of association and assembly sub-component using BFA.
Original scale	Interval
Citation	Skaaning (2018)
Data manipulation for aggregation	---
Indicator of	2. Fundamental Rights 2.2. Civil liberties
Aggregation	BFA of 2.2.A. freedom of expression, 2.2.B. freedom of association and assembly, 2.2.C. freedom of religion, 2.2.D. freedom of movement and 2.2.E. personal integrity and security
Indicators included	V_22_08, V_22_09, V_22_10
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).
Auxiliary variables	L_SD22B = lower bound for the 68% confidence interval U_SD22B = upper bound for the 68% confidence interval
Coverage	 <p>The bar chart illustrates the number of countries covered by the Freedom of association and assembly index (C_SD22B) over time. The vertical axis represents the 'Number of Countries Covered', ranging from 0 to 160 in increments of 20. The horizontal axis represents the years from 1975 to 2015, with major ticks every 10 years. The data shows that the index covers approximately 135 countries from 1975 to 1988. Starting in 1989, the number of countries covered increases, reaching approximately 155 by 1995 and remaining stable at that level through 2015.</p>

Freedom of religion (C_SD22C)

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_SD22C																				
Definition	A separate sub-component index comprised of two V-Dem general indicators on religious freedom based on expert surveys and a similarly broad in-house coded variable from CLD. The three indicators were aggregated into the freedom of religion sub-component using BFA.																				
Original scale	Interval																				
Citation	Skaaning (2018)																				
Data manipulation for aggregation	---																				
Indicator of	2. Fundamental Rights 2.2. Civil liberties																				
Aggregation	BFA of 2.2.A. freedom of expression, 2.2.B. freedom of association and assembly, 2.2.C. freedom of religion, 2.2.D. freedom of movement and 2.2.E. personal integrity and security																				
Indicators included	V_22_11, V_22_12, V_22_13																				
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).

Freedom of movement (C_SD22D)

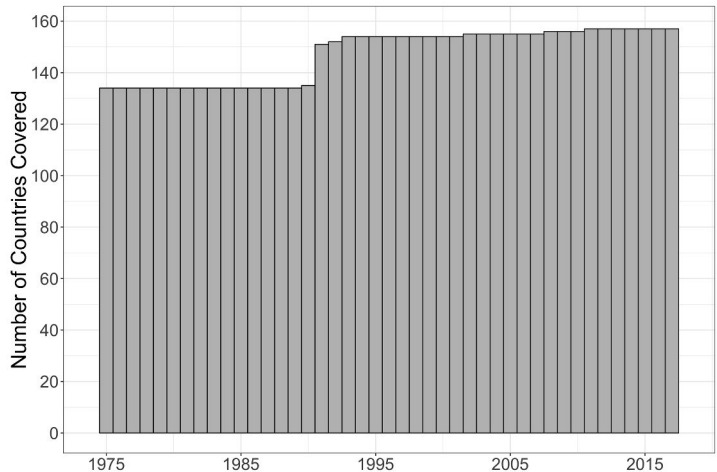

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_SD22D																				
Definition	Freedom of movement was captured by a general, in-house coded indicator from CLD and three, more specific, expert coded indicators from V-Dem that distinguish between foreign and domestic movement and provide assessments of the latter feature for men and women. The four indicators were aggregated into the freedom of movement sub-component using BFA.

Personal integrity and security (C_SD22E)

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_SD22E																				
Definition	Five indicators capture different types of violations, such as forced labour, torture, and political and extra-judicial disappearances and killings. To capture personal security more broadly, a general indicator on political violence was also included, which pertains to different types of conflict and violence and distinguishes between various levels. The six indicators were aggregated into the personal integrity and security sub-component using IRT.

Social group equality (C_SD23A)

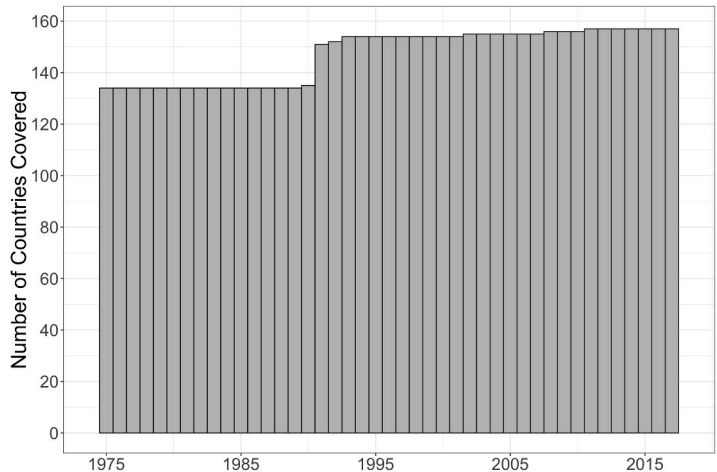

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_SD23A																				
Definition	Five V-Dem expert-coded indicators were used to measure social group equality, the first of the social rights and equality sub-components. Four of the underlying questions ask about social class and identity group inequalities with regard to civil liberties and political power distribution. The fifth asks about the representation of disadvantaged social groups. The five indicators were aggregated into the social group equality sub-component using IRT.																				
Original scale	Interval

Basic welfare (C_SD23B)

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_SD23B																				
Definition	The provision of basic welfare is measured using standard observable human development indicators: infant mortality rate, life expectancy, kilocalories per person per day, literacy rate and average years of schooling. In addition, two expert-based indicators from V-Dem were included that assess whether everyone in a given society has access to basic education and health care. All the indicators reflect the extent to which the basic needs of the population are being met. The seven indicators were aggregated into the basic welfare sub-component using IRT.

Gender equality (C_SD23C)

Data source	GSoD Indices
Original variable	Constructed variable
GSoD name	C_SD23C
Definition	Two expert-coded indicators from V-Dem were used to operationalize gender equality—power distribution by gender and female participation in civil society organizations—as well as three observational indicators on the ratio between female and male mean years of schooling (GHDx), the proportion of lower chamber female legislators (V-Dem) and the proportion of women in ministerial-level positions (IPU). The five indicators were aggregated into the gender equality sub-component using IRT.
Original scale	Interval
Citation	Skaaning (2018)
Data manipulation for aggregation	—
Indicator of	2. Fundamental Rights 2.3. Social rights and equality
Aggregation	BFA of 2.3.A. social group equality, 2.3.B. gender equality and 2.3.C. basic welfare
Indicators included	V_23_15, V_23_16, V_23_17, V_23_18, V_23_19
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).
Auxiliary variables	L_SD23C = lower bound for the 68% confidence interval U_SD23C = upper bound for the 68% confidence interval
Coverage	 <p>The bar chart illustrates the number of countries covered by the Gender Equality (C_SD23C) indicator over time. The vertical axis represents the 'Number of Countries Covered' from 0 to 160. The horizontal axis represents years from 1975 to 2015. The data shows a steady increase from approximately 135 countries in 1975 to about 155 countries by 1995, where it plateaus. The coverage remains consistent at this level through 2015.</p>

Indicators

Access to justice for men (v_21_01)

Data source	V-Dem																				
Original variable	v2clacjstm																				
GSoD name	v_21_01																				
Definition	<p>Question: Do men enjoy secure and effective access to justice? Responses: 0: Secure and effective access to justice for men is non-existent. 1: Secure and effective access to justice for men is usually not established or widely respected. 2: Secure and effective access to justice for men is inconsistently observed. Minor problems in most cases or occur rather unevenly across different parts of the country. 3: Secure and effective access to justice for men is usually observed. 4: Secure and effective access to justice for men is almost always observed.</p> <p>Clarification: This question specifies the extent to which men can bring cases before the courts without risk to their personal safety, trials are fair and men have effective ability to seek redress if the public authorities violate their rights, including the rights to counsel, defence and appeal. This question does not ask you to assess the relative access to justice for men and women. Thus, it is correct to assign the lowest possible score to a country if men and women enjoy equal but extremely limited access to justice.</p>

Fair trial (v_21_05)

Data source	CLD																				
Original variable	Fairtrial																				
GSoD name	v_21_05																				
Definition	<p>Definition: The indicator specifies the extent to which citizens have the right to a fair trial in practice: they are not subjected to arbitrary arrest, detention or exile; and they have the right to recognition as a person before the law; the right to be under the jurisdiction of and seek redress from competent, independent and impartial tribunals; and the right to be heard and to be tried without undue delay if arrested, detained or charged with a criminal offence.</p> <p>Indicator Scale:</p> <ol style="list-style-type: none"> 1. Severely restricted: Fair trials are very unlikely. The courts are totally subordinated to the will of government or the justice system is profoundly undermined by arbitrary arrests, incompetence, corruption and intimidation. 2. Substantially restricted: Some elements of fair trials exist but the courts are not fully independent of the government and/or the justice system is characterized by widespread corruption, intimidation and inefficiency. 3. Moderately restricted: The courts are generally independent of the government, but the justice system is characterized by moderate degrees of corruption or inefficiency. 4. Unrestricted: All elements of fair trials are respected. No arbitrary arrests take place, the courts are competent, independent and impartial; and hearings and trials generally follow arrest and charge within a reasonable time.

Freedom of discussion for women (v_22_04)

Data source	V-Dem																				
Original variable	v2cldiscw																				
GSoD name	v_22_04																				
Definition	<p>Question: Are women able to openly discuss political issues in private homes and in public spaces?</p> <p>Responses:</p> <p>0: Not respected. Hardly any freedom of expression exists for women. Women are subject to immediate and harsh intervention and harassment for expressing political opinions.</p> <p>1: Weakly respected. Expressions of political opinions by women are frequently exposed to intervention and harassment.</p> <p>2: Somewhat respected. Expressions of political opinions by women are occasionally exposed to intervention and harassment.</p> <p>3: Mostly respected. There are minor restraints on freedom of expression in the private sphere, predominantly limited to a few isolated cases or only linked to soft sanctions. As a rule, however, there is no intervention or harassment if women make political statements.</p> <p>4: Fully respected. Freedom of speech by women in their homes and in public spaces is unrestricted.</p> <p>Clarification: This indicator specifies the extent to which women are able to engage in private discussions, particularly on political issues, in private homes and public spaces, such as restaurants, public transport, sports events or at work, without fear of harassment by other members of the polity or the public authorities. Of interest are restrictions by the government and its agents but also cultural restrictions or customary laws that are enforced by other members of the polity, sometimes in informal ways. This question does not ask you to assess the relative freedom of men and women. Thus, it is correct to assign the lowest possible score to a country where men and women enjoy equal but extremely few rights to freedom of discussion.</p>

CSO entry and exit (v_22_o8)

Data source	V-Dem
Original variable	v2cseeorgs
GSoD name	v_22_o8
Definition	<p>Question: To what extent does the government achieve control over entry and exit by civil society organizations (CSOs) into public life?</p> <p>Responses:</p> <p>0: Monopolistic control. The government exercises an explicit monopoly over CSOs. The only organizations allowed to engage in political activity, such as endorsing parties or politicians, sponsoring public issues forums, organizing rallies or demonstrations, engaging in strikes or publicly commenting on public officials and policies, are government-sponsored organizations. The government actively represses those who attempt to defy its monopoly on political activity.</p> <p>1: Substantial control. The government licenses all CSOs and uses political criteria to bar organizations that are likely to oppose the government. There are at least some citizen-based organizations that play a limited role in politics independent of the government. The government actively represses those who attempt to flout its political criteria and bars them from any political activity.</p> <p>2: Moderate control. Whether the government ban on independent CSOs is partial or full, some prohibited organizations manage to play an active political role. Despite its ban on organizations of this sort, the government does not or cannot repress them, due to either its weakness or political expediency.</p> <p>3: Minimal control. Regardless of whether the government licenses CSOs, constitutional provisions exist that allow the government to ban organizations or movements that have a history of anti-democratic action (e.g. the banning of neo-fascist or communist organizations in the Federal Republic of Germany). Such bans take place within the rule of law and conditions of judicial independence.</p> <p>4: Unconstrained. Regardless of whether the government licenses CSOs, the government does not impede their formation and operation unless they are engaged in activities that seek to violently overthrow the government.</p>

Coverage

CSO repression (v_22_09)

Data source	V-Dem
Original variable	v2csreprss
GSoD name	v_22_09
Definition	<p>Question: Does the government attempt to repress civil society organizations?</p> <p>Responses:</p> <p>0: Severely. The government violently and actively pursues all real and some imagined members of CSOs, seeking not just to deter the activity of such groups but effectively to liquidate them. Examples include Stalinist Russia, Nazi Germany and Maoist China.</p> <p>1: Substantially. In addition to the kinds of harassment outlined in responses 2 and 3 below, the government also arrests, tries and imprisons leaders of and participants in opposition CSOs that are not acting unlawfully. Other sanctions include disruption of public gatherings and violent sanctions of activists such as beatings, threats to family members and destruction of valuable property. Examples include Mugabe's Zimbabwe, Poland under Martial Law and Serbia under Milosevic.</p> <p>2: Moderately. In addition to the material sanctions outlined in response 3, the government also engages in minor legal harassment such as detentions or short-term incarceration to dissuade CSOs from acting or expressing themselves. The government may also restrict the scope of CSOs' actions through measures that restrict the association of such organizations with each other or political parties, bar CSOs from taking certain actions or blocking international contacts. Examples include post-Martial Law Poland, Brazil in the early 1980s and the late Franco period in Spain.</p> <p>3: Weakly. The government uses material sanctions such as fines, firings and denial of social services, to deter oppositional CSOs from acting or expressing themselves. They may also use burdensome registration or incorporation procedures to slow the formation of new CSOs and sidetrack them from engagement. The government may also organize Government Organized Movements or NGOs (GONGOs) to crowd out independent organizations. Examples include Singapore in the post-Yew phase or Putin's Russia.</p> <p>4: No. Civil society organizations are free to organize, associate, strike, express themselves and criticize the government without fear of government sanction or harassment.</p>

Original variable	v2clrelig
GSoD name	v_22_11
Definition	<p>Question: Is there freedom of religion?</p> <p>Responses:</p> <p>0: Not respected by the public authorities. Hardly any freedom of religion exists. Any kind of religious practice is outlawed or at least controlled by the government to the extent that religious leaders are appointed by and subjected to the public authorities, which control the activities of religious communities in some detail.</p> <p>1: Weakly respected by the public authorities. Some elements of autonomous organized religious practices exist and are officially recognized but significant religious communities are repressed, prohibited or systematically disabled; voluntary conversions are restricted; and instances of discrimination or intimidation of individuals or groups due to their religion are common.</p> <p>2: Somewhat respected by the public authorities. Autonomous organized religious practices exist and are officially recognized. Minor religious communities are repressed, prohibited or systematically disabled, however, and/or there are occasional instances of discrimination or intimidation of individuals or groups based on their religion.</p> <p>3: Mostly respected by the public authorities. There are minor restrictions on the freedom of religion, predominantly limited to a few isolated cases. Minority religions face denial of registration, hindrance of foreign missionaries from entering the country, restrictions on proselytizing or hindrances to accessing the construction of places of worship.</p> <p>4: Fully respected by the public authorities. The population enjoys the right to practice any religious belief they choose. Religious groups may organize, select and train personnel; solicit and receive contributions; publish; and engage in consultations without undue interference. If religious communities have to register, the public authorities do not abuse the process to discriminate against a religion and do not constrain the right to worship before registration.</p> <p>Clarification: This indicator specifies the extent to which individuals and groups have the right to choose a religion, change their religion and practice that religion in private or in public as well as to proselytize peacefully without being subject to restrictions by the public authorities.</p>

Religious organization repression (v_22_12)

Data source	V-Dem
Original variable	v2csrlgsep
GSoD name	v_22_12
Definition	<p>Question: Does the government attempt to repress religious organizations?</p> <p>Responses:</p> <p>0: Severely. The government violently and actively pursues all real and some imagined members of religious organizations. It seeks not just to deter the activity of such groups but effectively to liquidate them. Examples include Stalinist Russia and Maoist China.</p> <p>1: Substantially. In addition to the kinds of harassment outlined in 2 and 3 below, the government also arrests, tries and imprisons leaders of and participants in oppositional religious organizations that have not acted unlawfully. Other sanctions include disruption of public gatherings and violent sanctions of activists, such as beatings, threats to families and destruction of valuable property.</p> <p>2: Moderately. In addition to the material sanctions outlined in 3 below, the government also engages in minor legal harassment such as detentions or short-term incarceration to dissuade religious organizations from acting or their members from expressing themselves. The government may also restrict the scope of their actions through measures that restrict the association of religious CSOs with each other or political parties, bar religious CSOs from taking certain actions or by blocking international contacts.</p> <p>3: Weakly. The government uses material sanctions such as fines, firings or the denial of social services to deter oppositional religious organizations from acting or their members from expressing themselves. They may also use burdensome registration or incorporation procedures to slow the formation of new religious CSOs and side-track them from engagement. The government may also organize parallel religious organizations to crowd out independent religious organizations.</p> <p>4: No. Religious CSOs are free to organize, associate, strike or express themselves and to criticize the government without fear of government sanctions or harassment.</p>

Freedom of thought, conscience and religion (v_22_13)

Data source	CLD																				
Original variable	Frerel																				
GSoD name	v_22_13																				
Definition	<p>Definition: The extent to which individuals and groups have freedom of thought, conscience and religion, that is, the right of citizens to have a religion or change their religion or belief of their own volition; and alone or in community manifest their religion or belief in practice, through worship, observance and teaching in private or public, as well as to proselytize peacefully without being subject to limitations or restrictions.</p> <p>Component scale:</p> <ol style="list-style-type: none"> 1. Severely restricted. Hardly any freedom of religion exists. As a rule, any kind of religious practice is controlled by the government and harshly suppressed. 2. Fairly restricted. Some elements of autonomous organized religious practice exists and is officially recognized, but major religious movements are repressed, prohibited or systematically disabled. 3. Modestly restricted. There are minor restraints on the freedom of religion, predominantly limited to a few isolated cases, but as a rule there are no interventions or prohibitions on communities or individual worshippers. 4. Unrestricted. Unhampered freedom of religion exists.

Freedom of foreign movement (v_22_14)

Data source	V-Dem																				
Original variable	v2clmove																				
GSoD name	v_22_14																				
Definition	<p>Question: Is there freedom of foreign travel and emigration?</p> <p>Responses:</p> <p>0: Not respected by the public authorities. Citizens are rarely allowed to emigrate or travel out of the country. Transgressors (or their families) are severely punished. People discredited by the public authorities are routinely exiled or prohibited from travelling.</p> <p>1: Weakly respected by the public authorities. The public authorities systematically restrict the right to travel, especially for political opponents or particular social groups. This can take the form of general restrictions on the duration of stays abroad or delays/refusals of visas.</p> <p>2: Somewhat respected by the public authorities. The right to travel for leading political opponents or particular social groups is occasionally restricted but ordinary citizens only face minor restrictions.</p> <p>3: Mostly respected by the public authorities. Limitations on freedom of movement and residence are not directed at political opponents but minor restrictions exist. For example, exit visas may be required and citizens may be prohibited from travelling outside the country when accompanied by other members of their family.</p> <p>4: Fully respected by the government. The freedom of citizens to travel from and to the country, and to emigrate and repatriate, is not restricted by the public authorities.</p> <p>Clarification: This indicator specifies the extent to which citizens are able to travel freely to and from the country and to emigrate without being subject to restrictions by the public authorities.</p>

Freedom of domestic movement for women (v_22_15)

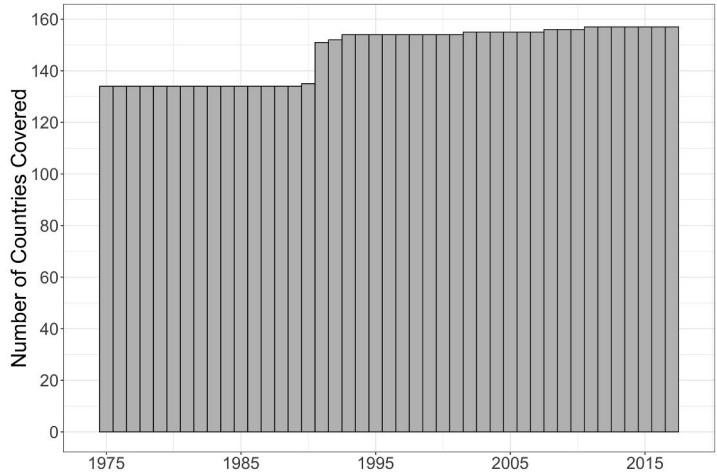

Data source	V-Dem																				
Original variable	v2cldmovew																				
GSoD name	v_22_15																				
Definition	<p>Question: Do women enjoy freedom of movement within the country?</p> <p>Responses:</p> <p>0: Virtually no women enjoy full freedom of movement (e.g. North Korea or Afghanistan under the Taliban).</p> <p>1: Some women enjoy full freedom of movement but most do not (e.g. Apartheid South Africa).</p> <p>2: Most women enjoy some freedom of movement but a sizeable minority does not. Alternatively, all women enjoy partial freedom of movement.</p> <p>3: Most women enjoy full freedom of movement but a small minority does not.</p> <p>4: Virtually all women enjoy full freedom of movement.</p> <p>Clarification: This indicator specifies the extent to which all women are able to move freely, in daytime and at night, in public thoroughfares and across regions within a country, and to establish permanent residence where they wish. Note that restrictions of movement might be imposed by the state and/or by informal norms and practices. Such restrictions sometimes fall on rural residents, on specific social groups or on dissidents. This question does not ask you to assess the relative freedom of men and women. Thus, it is correct to assign the lowest possible score to a country if men and women enjoy equal but extremely low levels of freedom of movement. Do not consider restrictions on movement that are placed on non-political criminals. Do not consider restrictions on movement that result from crime or unrest.</p>

Freedom from forced labour for women (v_22_18)

Data source	V-Dem																				
Original variable	v2cls slavef																				
GSoD name	v_22_18																				
Definition	<p>Question: Are adult women free from servitude and other kinds of forced labour?</p> <p>Responses:</p> <p>0: Female servitude or other kinds of forced labour is widespread and accepted (perhaps even organized) by the state.</p> <p>1: Female servitude or other kinds of forced labour is substantial. Although officially opposed by the public authorities, the state is unwilling or unable to effectively contain the practice.</p> <p>2: Female servitude or other kinds of forced labour exists but is not widespread and usually actively opposed by the public authorities, or only tolerated in some particular areas or among particular social groups.</p> <p>3: Female servitude or other kinds of forced labour is infrequent and only found in the criminal underground. It is actively and sincerely opposed by the public authorities.</p> <p>4: Female servitude or other kinds of forced labour is virtually non-existent.</p> <p>Clarification: Involuntary servitude occurs when an adult is unable to leave a job s/he desires to leave not for reasons of economic necessity, but instead due to employer coercion. This includes labour camps but not work or service that forms part of normal civic obligations such as conscription or employment in command economies. This question does not ask you to assess the relative freedom of men and women from forced labour. Thus, a country in which both men and women suffer the same conditions of servitude might be coded a (0) for women, even though there is equality across the sexes.</p>

Original variable	v2clkill																				
GSoD name	v_22_21																				
Definition	<p>Question: Is there freedom from political killings?</p> <p>Responses:</p> <p>0: Not respected by the public authorities. Political killings are practiced systematically and they are typically incited and approved by the senior leaders of the government.</p> <p>1: Weakly respected by the public authorities. Political killings are practiced frequently and senior government leaders are not actively working to prevent them.</p> <p>2: Somewhat respected by the public authorities. Political killings are practiced occasionally but they are typically not incited and approved by senior government leaders.</p> <p>3: Mostly respected by the public authorities. Political killings are practiced in a few isolated cases but they are not incited or approved by senior government leaders.</p> <p>4: Fully respected by the public authorities. Political killings do not take place.</p> <p>Clarification: Political killings are killings by the state or its agents without due process of law for the purpose of eliminating political opponents. These killings are the result of the deliberate use of lethal force by the police, security forces, prison officials, or other agents of the state, including paramilitary groups.</p>

Human rights protection scores (v_22_22)

Data source	Political Terror Scale																																																																																				
Original variable	PTS_S																																																																																				
GSoD name	v_22_22																																																																																				
Definition	What is the level of political violence and terror? PTS scores based on information contained in the annual human rights reports produced by the US Department of State. If these reports were not available, Amnesty International reports were used. Reports are scored on a 5-point scale. Higher scores indicate higher levels of abuse, political terror, or physical integrity rights violations than lower scores.																																																																																				
Original scale	Ordinal

Internal conflict (v_22_23)

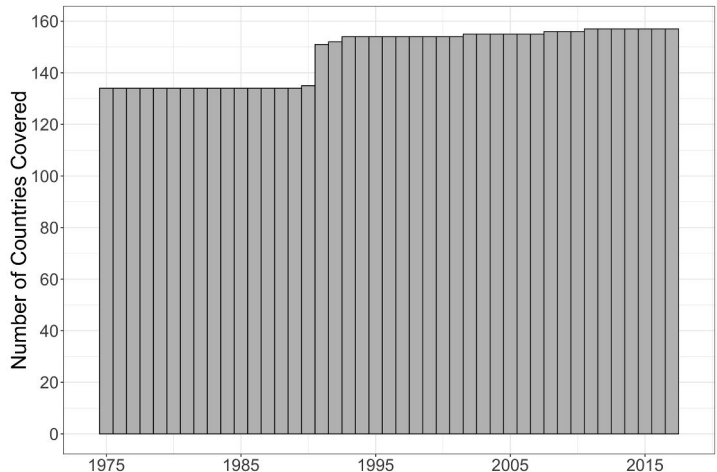

Data source	ICRG																																																																				
Original variable	D																																																																				
GSoD name	v_22_23																																																																				
Definition	An assessment of political violence in the country and its actual or potential impact on governance. The highest rating is given to those countries where there is no armed or civil opposition to the government and the government does not indulge in arbitrary violence, direct or indirect, against its own people. The lowest rating is given to a country embroiled in an ongoing civil war. The risk rating assigned is the sum of three subcomponents (Civil War/Coup Threat, Terrorism/Political Violence, Civil Disorder), each with a maximum score of four points and a minimum score of 0 points. A score of 4 points equates to very low risk and a score of 0 points to very high risk.																																																																				
Original scale	Ordinal																																																																				
Citation	Howell (2011: 4)																																																																				
Data manipulation for aggregation	Recoded into 20 categories, each containing five percentiles, ranging from 1 (the lowest five percentiles) to 20 (the highest five percentiles).																																																																				
Indicator of	2. Fundamental Rights 2.2. Civil liberties 2.2.E. Personal integrity and security																																																																				
Aggregation	IRT to construct sub-dimension 2.2.E. Personal integrity and security.																																																																				
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).																																																																				
Coverage	 <p>The bar chart illustrates the number of countries covered by the Internal conflict indicator over time. The Y-axis represents the 'Number of Countries Covered' from 0 to 160. The X-axis represents years from 1975 to 2015. Coverage begins in 1984 with approximately 100 countries. From 1985 to 2015, the number of countries covered fluctuates, generally staying between 110 and 130, with a slight increase to around 130 in the later years.</p> <table border="1"> <thead> <tr> <th>Year</th> <th>Number of Countries Covered</th> </tr> </thead> <tbody> <tr><td>1975</td><td>0</td></tr> <tr><td>1984</td><td>100</td></tr> <tr><td>1985</td><td>115</td></tr> <tr><td>1986</td><td>118</td></tr> <tr><td>1987</td><td>118</td></tr> <tr><td>1988</td><td>118</td></tr> <tr><td>1989</td><td>118</td></tr> <tr><td>1990</td><td>120</td></tr> <tr><td>1991</td><td>120</td></tr> <tr><td>1992</td><td>120</td></tr> <tr><td>1993</td><td>120</td></tr> <tr><td>1994</td><td>120</td></tr> <tr><td>1995</td><td>120</td></tr> <tr><td>1996</td><td>120</td></tr> <tr><td>1997</td><td>122</td></tr> <tr><td>1998</td><td>130</td></tr> <tr><td>1999</td><td>130</td></tr> <tr><td>2000</td><td>130</td></tr> <tr><td>2001</td><td>130</td></tr> <tr><td>2002</td><td>130</td></tr> <tr><td>2003</td><td>130</td></tr> <tr><td>2004</td><td>130</td></tr> <tr><td>2005</td><td>130</td></tr> <tr><td>2006</td><td>130</td></tr> <tr><td>2007</td><td>130</td></tr> <tr><td>2008</td><td>130</td></tr> <tr><td>2009</td><td>130</td></tr> <tr><td>2010</td><td>130</td></tr> <tr><td>2011</td><td>130</td></tr> <tr><td>2012</td><td>130</td></tr> <tr><td>2013</td><td>130</td></tr> <tr><td>2014</td><td>130</td></tr> <tr><td>2015</td><td>130</td></tr> </tbody> </table>	Year	Number of Countries Covered	1975	0	1984	100	1985	115	1986	118	1987	118	1988	118	1989	118	1990	120	1991	120	1992	120	1993	120	1994	120	1995	120	1996	120	1997	122	1998	130	1999	130	2000	130	2001	130	2002	130	2003	130	2004	130	2005	130	2006	130	2007	130	2008	130	2009	130	2010	130	2011	130	2012	130	2013	130	2014	130	2015	130

Power distributed by socio-economic position (v_23_03)

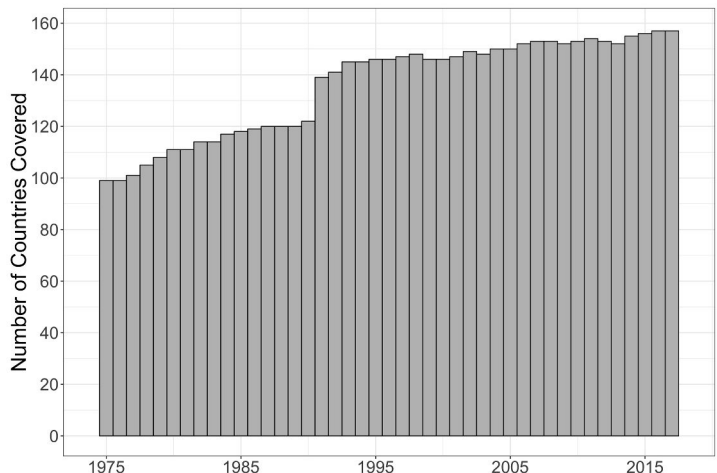

Data source	V-Dem																				
Original variable	v2pepwrses																				
GSoD name	v_23_03																				
Definition	<p>Question: Is political power distributed according to socio-economic position?</p> <p>Responses:</p> <p>0: Wealthy people enjoy a virtual monopoly on political power. People of average wealth and poorer people have almost no influence.</p> <p>1: Wealthy people enjoy a dominant hold on political power. People of average wealth have little say. Poorer people have essentially no influence.</p> <p>2: Wealthy people have a very strong hold on political power. People of average wealth or poorer people have some degree of influence but only on issues that matter less to wealthy people.</p> <p>3: Wealthy people have more political power than others but people of average wealth have almost as much influence and poor people have a significant degree of political power.</p> <p>4: Wealthy people have no more political power than those whose economic status is average or poor. Political power is more or less equally distributed across economic groups.</p> <p>Clarification: All societies are characterized by some degree of economic (wealth and income) inequality. In some societies, income and wealth are distributed in a grossly unequal fashion. In others, the difference between rich and poor is not so great. Here, we are concerned not with the degree of social inequality but rather with the political effects of this inequality. Specifically, we are concerned with the extent to which wealth and income translate into political power.</p>

Power distributed by social group (v_23_04)

Data source	V-Dem
Original variable	v2pepwrSOC
GSoD name	v_23_04
Definition	<p>Question: Is political power distributed according to social groups?</p> <p>Responses:</p> <p>0: Political power is monopolized by one social group comprising a minority of the population. This monopoly is institutionalized, or not subject to frequent change.</p> <p>1: Political power is monopolized by several social groups comprising a <i>minority</i> of the population. This monopoly is institutionalized, or not subject to frequent change.</p> <p>2: Political power is monopolized by several social groups comprising a <i>majority</i> of the population. This monopoly is institutionalized, or not subject to frequent change.</p> <p>3: Either all social groups possess some political power, with some groups having more power than others; or different social groups alternate in power, with one group controlling much of the political power for a period of time followed by another group, but all significant groups have a turn at the seat of power.</p> <p>4: All social groups have roughly equal political power or there are no strong ethnic, caste, linguistic, racial, religious or regional differences to speak of. Social group characteristics are not relevant to politics.</p> <p>Clarification: A social group is differentiated within a country by caste, ethnicity, language, race, region, religion or some combination thereof. (It does not include identities grounded in sexual orientation or socio-economic status.) Social group identity is contextually defined and is likely to vary across countries and through time. Social group identities are also likely to cross-cut, so that a given person could be defined in multiple ways and as part of multiple groups. Nonetheless, at any given point in time there are social groups within a society that are understood by those residing in that society to be different, in ways that may be politically relevant.</p>

Religious Tensions/Ethnic Tensions (v_23_06)

Data source	ICRG																																																																				
Original variable	H / J																																																																				
GSoD name	v_23_06																																																																				
Definition	Religious Tensions: What is the degree of tension within a country attributable to religious divisions, domination, or suppression? Ethnic Tensions: What is the degree of tension within a country attributable to racial, nationality, or language divisions?																																																																				
Original scale	Ordinal																																																																				
Citation	Howell (2011: 4)																																																																				
Data manipulation for aggregation	The variable takes the highest score of the two composing elements, indicating the highest level of tensions, religious or ethnic.																																																																				
Indicator of	2. Fundamental Rights 2.3. Social rights and equality 2.3.A. Social group equality																																																																				
Aggregation	IRT to construct sub-dimension 2.3.A. Social group equality.

Infant mortality rate (v_23_o8)

Data source	UN statistics																																																																																				
Original name	Infant mortality rate (per 1000 live births)																																																																																				
GSoD name	v_23_o8																																																																																				
Definition	The probability that a child born in a specific year will die before reaching the age of one, if subject to current age-specific mortality rates. Expressed as a rate per 1000 live births.																																																																																				
Original scale	Interval																																																																																				
Citation	UN IGME (2017)																																																																																				
Data manipulation for aggregation	Recoded into 20 categories, each containing five percentiles, ranging from 1 (the lowest five percentiles) to 20 (the highest five percentiles).																																																																																				
Indicator of	2. Fundamental Rights 2.3. Social rights and equality 2.3.B. Basic welfare																																																																																				
Aggregation	IRT to construct sub-dimension 2.3.B. Basic welfare.																																																																																				
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).																																																																																				
Coverage	 <p>The bar chart illustrates the number of countries covered by the infant mortality rate data over time. The vertical axis represents the 'Number of Countries Covered' from 0 to 160 in increments of 20. The horizontal axis represents years from 1975 to 2015 in 10-year increments. The data shows a steady increase from 1975 to 1995, where the number of countries covered reaches approximately 155 and remains constant through 2015.</p> <table border="1"> <thead> <tr> <th>Year</th> <th>Number of Countries Covered</th> </tr> </thead> <tbody> <tr><td>1975</td><td>120</td></tr> <tr><td>1976</td><td>120</td></tr> <tr><td>1977</td><td>122</td></tr> <tr><td>1978</td><td>123</td></tr> <tr><td>1979</td><td>124</td></tr> <tr><td>1980</td><td>125</td></tr> <tr><td>1981</td><td>126</td></tr> <tr><td>1982</td><td>127</td></tr> <tr><td>1983</td><td>128</td></tr> <tr><td>1984</td><td>129</td></tr> <tr><td>1985</td><td>130</td></tr> <tr><td>1986</td><td>130</td></tr> <tr><td>1987</td><td>130</td></tr> <tr><td>1988</td><td>130</td></tr> <tr><td>1989</td><td>130</td></tr> <tr><td>1990</td><td>130</td></tr> <tr><td>1991</td><td>130</td></tr> <tr><td>1992</td><td>130</td></tr> <tr><td>1993</td><td>130</td></tr> <tr><td>1994</td><td>130</td></tr> <tr><td>1995</td><td>155</td></tr> <tr><td>1996</td><td>155</td></tr> <tr><td>1997</td><td>155</td></tr> <tr><td>1998</td><td>155</td></tr> <tr><td>1999</td><td>155</td></tr> <tr><td>2000</td><td>155</td></tr> <tr><td>2001</td><td>155</td></tr> <tr><td>2002</td><td>155</td></tr> <tr><td>2003</td><td>155</td></tr> <tr><td>2004</td><td>155</td></tr> <tr><td>2005</td><td>155</td></tr> <tr><td>2006</td><td>155</td></tr> <tr><td>2007</td><td>155</td></tr> <tr><td>2008</td><td>155</td></tr> <tr><td>2009</td><td>155</td></tr> <tr><td>2010</td><td>155</td></tr> <tr><td>2011</td><td>155</td></tr> <tr><td>2012</td><td>155</td></tr> <tr><td>2013</td><td>155</td></tr> <tr><td>2014</td><td>155</td></tr> <tr><td>2015</td><td>155</td></tr> </tbody> </table>	Year	Number of Countries Covered	1975	120	1976	120	1977	122	1978	123	1979	124	1980	125	1981	126	1982	127	1983	128	1984	129	1985	130	1986	130	1987	130	1988	130	1989	130	1990	130	1991	130	1992	130	1993	130	1994	130	1995	155	1996	155	1997	155	1998	155	1999	155	2000	155	2001	155	2002	155	2003	155	2004	155	2005	155	2006	155	2007	155	2008	155	2009	155	2010	155	2011	155	2012	155	2013	155	2014	155	2015	155

Kilocalories per person per day (v_23_10)

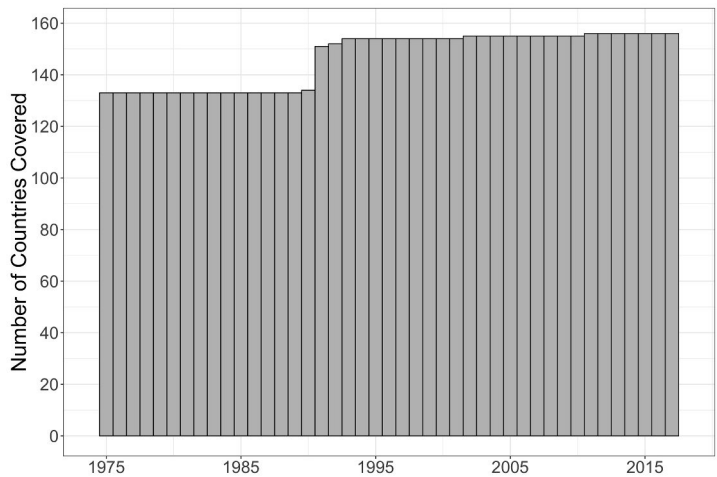

Data source	FAO																				
Original name	Grand Total - kcal/capita/day																				
GSoD name	v_23_10																				
Definition	Calorie supply per capita is the amount of food available for consumption, measured in kilocalories per capita per day. This figure is reached by dividing the total available food supply for human consumption by the population. This data set tracks the calorie supply per capita in each country for calories available from crop products. Although these figures can be taken as the average supply available for consumption, actual consumption by individuals can vary greatly.																				
Original scale	Interval																				
Citation	Food and Agriculture Organization of the United Nations (2016)																				
Data manipulation for aggregation	Recoded into 20 categories, each containing five percentiles, ranging from 1 (the lowest five percentiles) to 20 (the highest five percentiles).

Literacy (v_23_11)

Data source	UNESCO																				
Original name	Adult literacy rate, population over 15																				
GSoD name	v_23_11																				
Definition	Percentage of the population age 15 and above who can, with understanding, read and write a short, simple statement on their everyday life. This indicator is calculated by dividing the number of literates aged 15 years and over by the corresponding age group population and multiplying the result by 100. Data on literacy is compiled by the UNESCO Institute for Statistics based on national censuses and household surveys or, for countries without recent literacy data, using the Global Age-Specific Literacy Projection Model (GALP)																				
Original scale	Interval																				
Citation	UNESCO Institute for Statistics (2015)																				
Data manipulation for aggregation	Linear interpolation within countries using the information from the years with valid values. Recoded into 20 categories, each containing five percentiles, ranging from 1 (the lowest five percentiles) to 20 (the highest five percentiles).																				
Indicator of	2. Fundamental Rights 2.3. Social rights and equality 2.3.B. Basic welfare

Mean years of schooling (v_23_12)

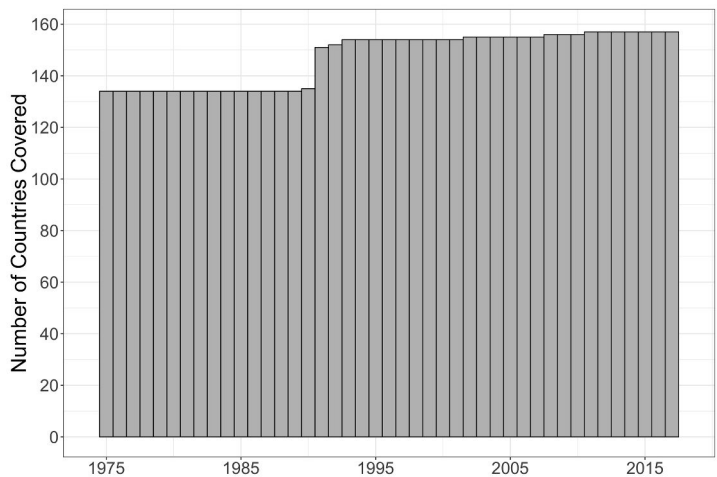

Data source	IMHE
Original name	Average years of educational attainment for adults older than 25, age standardized, both sexes
GSoD name	v_23_12
Definition	Estimates of average years of educational attainment per capita. This measure is available disaggregated by age and gender and is offered in both age-standardized and population-weighted series. Age-standardized aggregates use model populations to control for differences in age structure across time and geography. The population-weighted aggregates use IHME population estimates to create average values for the groups in question.
Original scale	Interval
Citation	IHME (2015)
Data manipulation for aggregation	Recoded into 20 categories, each containing five percentiles, ranging from 1 (the lowest five percentiles) to 20 (the highest five percentiles).
Indicator of	2. Fundamental Rights 2.3. Social rights and equality 2.3.B. Basic welfare
Aggregation	IRT to construct sub-dimension 2.3.B. Basic welfare.
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).
Coverage	 <p>The bar chart illustrates the number of countries covered by the Mean years of schooling indicator over time. The vertical axis represents the 'Number of Countries Covered' from 0 to 160 in increments of 20. The horizontal axis shows the years 1975, 1985, 1995, 2005, and 2015. The data shows that the number of countries covered was approximately 130 in 1975, remained relatively stable until the late 1980s, then increased to about 150 by 1995 and remained stable through 2015.</p>

Educational equality (v_23_13)

Data source	V-Dem																				
Original variable	v2peedueq																				
GSoD name	v_23_11																				
Definition	<p>Question: To what extent is high quality basic education guaranteed to all, sufficient to enable them to exercise their basic rights as adult citizens?</p> <p>Responses:</p> <p>0: Extreme. Provision of high quality basic education is extremely unequal and at least 75 per cent of children receive education of such low quality that it undermines their ability to exercise their basic rights as adult citizens.</p> <p>1: Unequal. Provision of high quality basic education is extremely unequal and at least 25 per cent of children receive education of such low quality that it undermines their ability to exercise their basic rights as adult citizens.</p> <p>2: Somewhat equal. Basic education is relatively equal in quality but 10–25 per cent of children receive education of such low quality that it undermines their ability to exercise their basic rights as adult citizens.</p> <p>3: Relatively equal. Basic education overall is equal in quality but 5–10 per cent of children receive education of such low quality that it probably undermines their ability to exercise their basic rights as adult citizens.</p> <p>4: Equal. Basic education is equal in quality and less than five per cent of children receive education of such low quality that it probably undermines their ability to exercise their basic rights as adult citizens.</p> <p>Clarification: Basic education typically refers to schooling between 6 and 16 years of age but this varies slightly among countries.</p>																				
Original scale	Ordinal, converted to interval by the measurement model.																				
Citation	Pemstein et al. (2018) Coppedge et al. (2018: 188)																				
Data manipulation for aggregation	Recoded into 20 categories, each containing five percentiles, ranging from 1 (the lowest five percentiles) to 20 (the highest five percentiles).																				
Indicator of	2. Fundamental Rights 2.3. Social rights and equality 2.3.B. Basic welfare

Health equality (v_23_14)

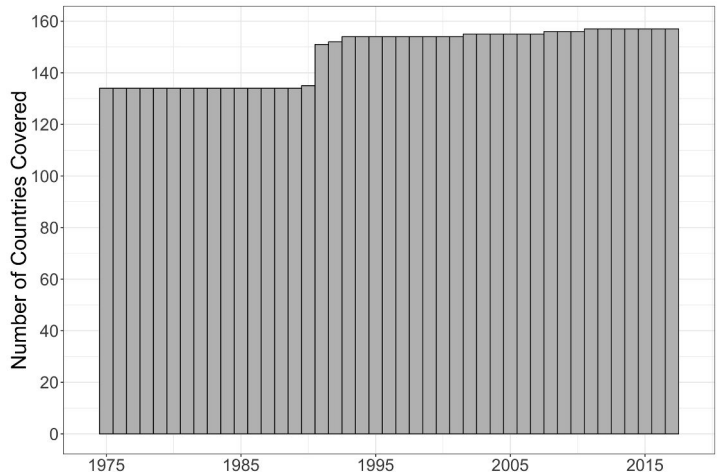

Data source	V-Dem																				
Original variable	v2pehealth																				
GSoD name	v_23_14																				
Definition	<p>Question: To what extent is high quality basic health care guaranteed to all, sufficient to enable them to exercise their basic political rights as adult citizens?</p> <p>Responses:</p> <p>0: Extreme. Because of poor quality health care, at least 75 per cent of citizens' ability to exercise their political rights as adult citizens is undermined.</p> <p>1: Unequal. Because of poor quality health care, at least 25 per cent of citizens' ability to exercise their political rights as adult citizens is undermined.</p> <p>2: Somewhat equal. Because of poor quality health care, 10–25 per cent of citizens' ability to exercise their political rights as adult citizens is undermined.</p> <p>3: Relatively equal. Basic health care overall is equal in quality but because of poor quality health care, 5–10 per cent of citizens' ability to exercise their political rights as adult citizens is undermined.</p> <p>4: Equal. Basic health care is equal in quality and less than 5 per cent of citizens cannot exercise their basic political rights as adult citizens.</p> <p>Clarification: Poor quality health care can leave citizens unable to exercise their basic rights as adult citizens by failing to adequately treat preventable and treatable illnesses that render them unable to work, participate in social or political organizations, or vote (where voting is allowed).</p>

Female vs. male mean years of schooling (v_23_17)

Data source	IHME																				
Original name	Average years of educational attainment for adults older than 25 - age standardized; male and female																				
GSoD name	V_23_17																				
Definition	Estimates of average years of educational attainment per capita. This measure is available disaggregated by age and gender and is offered in both age-standardized and population weighted series. Age-standardized aggregates use model populations to control for differences in age structure across time and geography. The population-weighted aggregates use IHME population estimates to create average values for the groups in question.																				
Original scale	Interval

Lower chamber female legislators (v_23_18)

Data source	V-Dem
Original variable	v2lgfemleg
GSoD name	v_23_18
Definition	Question: What percentage of the lower (or unicameral) chamber of the legislature is female? Responses: Percentage
Original scale	Interval
Citation	Coppedge et al. (2018: 138)
Data manipulation for aggregation	Linear interpolation within countries using the information from the years with valid values. Recoded into 20 categories, each containing five percentiles, ranging from 1 (the lowest five percentiles) to 20 (the highest five percentiles).
Indicator of	2. Fundamental Rights 2.3. Social rights and equality 2.3.C. Gender equality
Aggregation	IRT to construct sub-dimension 2.3.C. Gender equality.
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).
Coverage	 <p>The bar chart illustrates the growth in the number of countries covered by the indicator over time. The vertical axis, labeled 'Number of Countries Covered', ranges from 0 to 160 in increments of 20. The horizontal axis shows years from 1975 to 2015 in 10-year increments. The data shows a steady increase from 1975 (approx. 95 countries) to 1985 (approx. 125 countries), followed by a more rapid increase until 1995 (approx. 155 countries), after which the number of countries covered remains relatively stable, ending at approximately 155 in 2015.</p>

Election women in the cabinet (v_23_19)

Data source	V-Dem																				
Original variable	v2elwomcab																				
GSoD name	v_23_19																				
Definition	<p>Question: In the first cabinet after this national election, what percentage (%) of the ministers was female?</p> <p>Clarification: A "minister" is defined as a person with a specific set of duties (a portfolio). It excludes ministers without portfolio and no specific responsibilities. Please provide an estimate if you do not know the exact figure</p> <p>Responses: Percentage</p>

3. Checks on Government

Checks on Government is the third of the five attributes of democracy developed by International IDEA's Global State of Democracy Indices. This section of the Codebook provides details about the subattributes and indicators that comprise the index of Checks on Government.

1 attribute

- Checks on Government

3 subattributes

- Effective parliament
- Judicial independence
- Media integrity

15 indicators

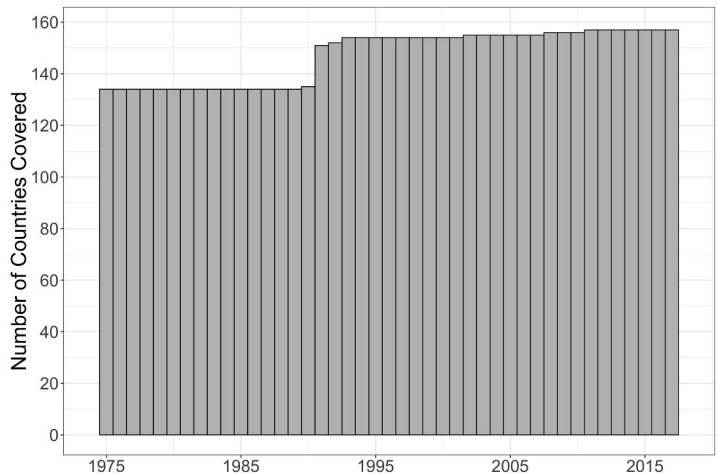

Attribute

Checks on Government (C_A3)

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_A3																				
Definition	Besides regular elections, the exercise of political power needs to be continuously subjected to scrutiny. If the other branches of government (the legislature and the judiciary) or a critical and pluralistic press do not check executive power, they are more prone to be abused for private gain and to biased political decision-making and implementation. Vertical accountability through elections should be supplemented by horizontal accountability between elections. The three subattributes were aggregated into the Checks on Government index using BFA.																				
Original scale	Interval																				
Citation	Skaaning (2018)

Subattributes

Effective parliament (C_SD31)

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_SD31																				
Definition	The effectiveness of parliament subattribute denotes the extent to which the legislature is capable of overseeing the executive. It includes three indicators from the V-Dem experts survey that tap fairly directly into the effectiveness of parliament. Another V-Dem indicator on executive oversight and the executive constraints indicator from Polity are included as they capture relevant aspects of institutional Checks on Government not covered by judicial independence and media integrity. The five indicators were aggregated into the media integrity subattribute using IRT.																				
Original scale	Interval																				
Citation	Skaaning (2018)																				
Data manipulation for aggregation	---																				
Indicator of	3. Checks on Government																				
Aggregation	BFA of 3.1. clean elections, 3.2. free political parties and 3.3. elected government to create 3. Checks on Government.

Judicial independence (C_SD32)

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_SD32																				
Definition	The judicial independence subattribute denotes the extent to which the courts are not subject to undue influence from the other branches of government, especially the executive. Since our framework places judicial independence under the attribute concerning Checks on Government, it is important to supplement the three judicial independence indicators with two indicators on government compliance with the courts. The five indicators were aggregated into the media integrity subattribute using IRT.																				
Original scale	Interval

Media integrity (C_SD33)

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_SD33																				
Definition	The media integrity subattribute denotes the extent to which the media landscape offers diverse and critical coverage of political issues. Media integrity and freedom of expression are related. Nonetheless, the media can do a poor job controlling the government even in a situation of media freedom if they are very one-sided, uncritical, superficial or corrupt. V-Dem offers indicators that reflect these additional circumstances. These indicators are based on expert surveys in addition to an in-house coded indicator from MFD, which indicates whether the media are critical of the government and its officials. The five indicators were aggregated into the media integrity subattribute using BFA.																				
Original scale	Interval

Legislature opposition parties (v_31_04)

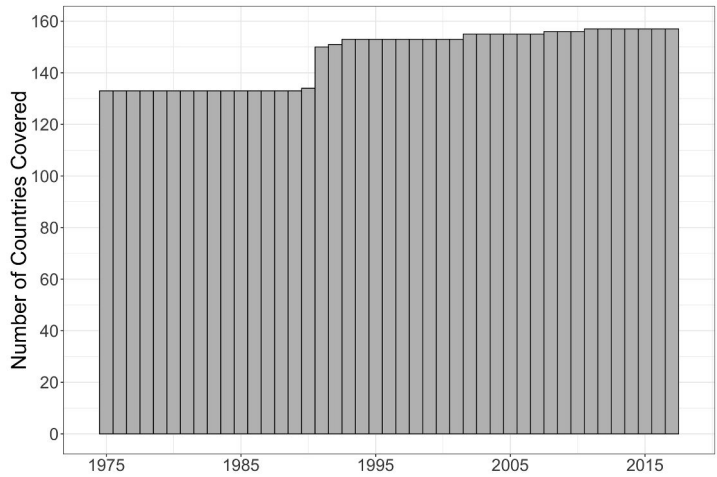

Data source	V-Dem
Original variable	v2lgoppart
GSoD name	v_31_04
Definition	<p>Question: Are opposition parties (those not in the ruling party or coalition) able to exercise oversight and investigatory functions against the wishes of the governing party or coalition?</p> <p>Responses: 0: No, not at all. 1: Occasionally. 2: Yes, for the most part.</p>
Original scale	Ordinal, converted to interval by the measurement model.
Citation	Pemstein et al. (2018) Coppedge et al. (2018: 132)
Data manipulation for aggregation	Recoded into 20 categories, each containing five percentiles, ranging from 1 (the lowest five percentiles) to 20 (the highest five percentiles).
Indicator of	3. Checks on Government 3.1. Effective parliament
Aggregation	IRT to construct subattribute 3.1. Effective parliament.
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).
Coverage	

Executive constraints (v_31_05)

Data source	Polity
Original variable	Xconst
GSoD name	v_31_05
Definition	Operationally, this variable refers to the extent of institutionalized constraints on the decision-making powers of chief executives, whether individuals or collectivities. Such limitations may be imposed by any 'accountability groups'. In Western democracies these are usually legislatures. Other kinds of accountability groups are the ruling party in a one-party state; councils of nobles or powerful advisers in monarchies; the military in coup-prone polities; and, in many states, a strong, independent judiciary. The concern is therefore with the checks and balances between the various parts of the decision-making process. A seven-category scale is used: 1. Unlimited authority. 2. Intermediate category. 3. Slight to moderate limitation on executive authority. 4. Intermediate category. 5. Substantial limitations on executive authority. 6. Intermediate category. 7. Executive party or subordination.
Original scale	Ordinal
Citation	Marshall, Gurr and Jagers (2016: 25)
Data manipulation for aggregation	Codes -99 to -66 treated as missing values.
Indicator of	3. Checks on Government 3.1. Effective parliament
Aggregation	IRT to construct subattribute 3.1. Effective parliament.
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).
Coverage	<p>The bar chart illustrates the number of countries covered by the Executive constraints variable over time. The vertical axis represents the 'Number of Countries Covered' from 0 to 160. The horizontal axis represents years from 1975 to 2015. The data shows a relatively stable number of countries covered (around 130) until the mid-1980s, after which there is a significant and steady increase, reaching approximately 155 countries by 2015.</p>

High Court independence (v_32_01)

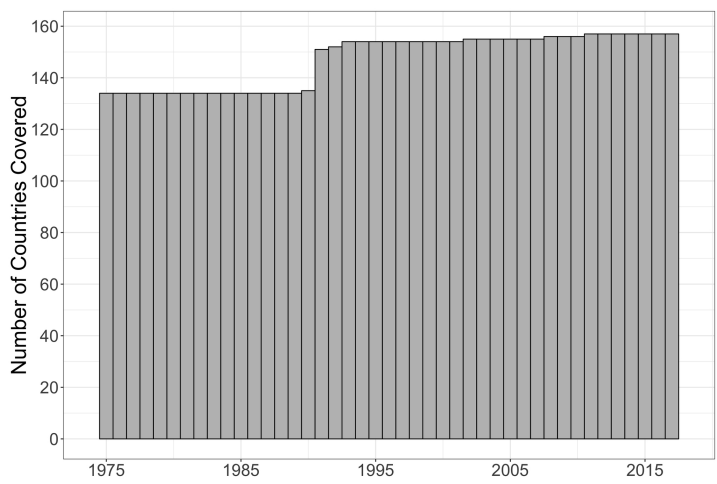

Data source	V-Dem																				
Original variable	v2juhcind																				
GSoD name	v_32_01																				
Definition	<p>Question: When the High Court in the judicial system rules in cases that are salient to the government, how often would you say that it makes decisions that merely reflect the government's wishes regardless of its sincere view of the legal record?</p> <p>Responses:</p> <ul style="list-style-type: none"> 0: Always. 1: Usually. 2: About half of the time. 3: Seldom. 4: Never. <p>Clarification: We are seeking to identify autonomous judicial decision-making and its absence. Decisions certainly can reflect government wishes without 'merely reflecting' those wishes, in that a court can be autonomous when its decisions support the government's position because a court can be fairly persuaded that the government's position is meritorious. 'Merely reflect the wishes of the government' means that the court's own sincere evaluation of the record is irrelevant to the outcome. The court simply adopts the government's position regardless of its sincere view.</p>																				
Original scale	Ordinal, converted to interval by the measurement model.																				
Citation	Pemstein et al. (2018) Coppedge et al. (2018: 153)																				
Data manipulation for aggregation	Recoded into 20 categories, each containing five percentiles, ranging from 1 (the lowest five percentiles) to 20 (the highest five percentiles).

Compliance with High Court (v_32_03)

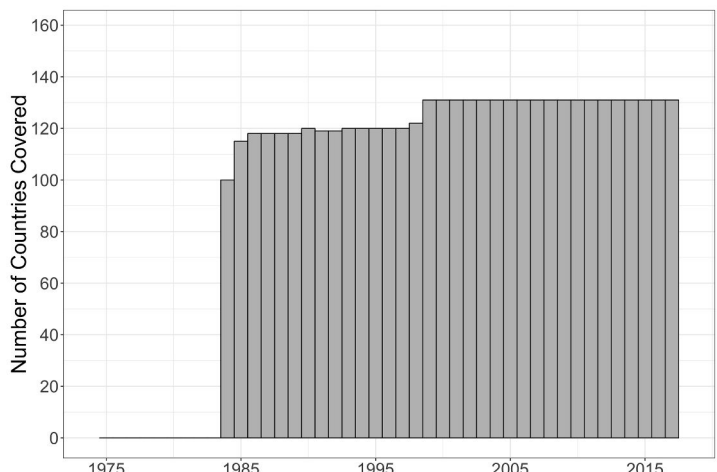

Data source	V-Dem
Original variable	v2juhccomp
GSoD name	v_32_03
Definition	<p>Question: How often would you say the government complies with important decisions of the High Court with which it disagrees?</p> <p>Responses: 0: Never. 1: Seldom. 2: About half of the time. 3: Usually. 4: Always.</p>
Original scale	Ordinal, converted to interval by the measurement model.
Citation	Pemstein et al. (2018) Coppedge et al. (2018: 154)
Data manipulation for aggregation	Recoded into 20 categories, each containing five percentiles, ranging from 1 (the lowest five percentiles) to 20 (the highest five percentiles).
Indicator of	3. Checks on Government 3.2. Judicial independence
Aggregation	IRT to construct subattribute 3.2. Judicial independence.
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).
Coverage	 <p>The bar chart illustrates the number of countries covered by the V-Dem dataset for the variable 'Compliance with High Court' (v_32_03) from 1975 to 2015. The y-axis, labeled 'Number of Countries Covered', ranges from 0 to 160 in increments of 20. The x-axis shows the years 1975, 1985, 1995, 2005, and 2015. The data shows that the number of countries covered was approximately 135 in 1975 and remained relatively stable until the late 1980s. From 1990 onwards, the number of countries covered increased to approximately 155 and remained stable through 2015.</p>

Compliance with judiciary (v_32_04)

Data source	V-Dem																				
Original variable	v2jucomp																				
GSoD name	v_32_04																				
Definition	<p>Question: How often would you say the government complies with important decisions by other courts with which it disagrees?</p> <p>Responses:</p> <ul style="list-style-type: none"> 0: Never. 1: Seldom. 2: About half of the time. 3: Usually. 4: Always. <p>Clarification: We are looking for a judgment on the entire judiciary excluding the High Court. Consider judges in both the ordinary courts and the specialized courts.</p>

Media freedom (v_33_05)

Data source	MFD																				
Original variable	Media freedom																				
GSoD name	v_33_05																				
Definition	<p>The media environments around the world are sorted into three basic categories:</p> <p>1 — Free: Countries where criticism of the government and government officials is a common and normal part of the political dialogue in the mediated public sphere.</p> <p>2 — Imperfectly Free: Countries where the social, legal or economic costs related to criticism of the government or government officials limit public criticism, but investigative journalism and criticism of major policy failings can and do occur.</p> <p>3 — Not Free: Countries where it is not possible to safely criticize government or government officials.</p> <p>Clarification: In the original data set (Van Belle 2000), there were four categories. Category 4 meant that the government directly controlled all news media, whereas category 3 meant that the government exerted indirect control. Since the end of the Cold War and with the massive growth in information technology, distinguishing between state-operated news media and media controlled by other means became something of a pointless exercise.</p>

4. Impartial Administration

Impartial Administration represents the fourth of the five attributes of democracy developed for International IDEA's Global State of Democracy Indices. This section of the Codebook provides details about the subattributes and indicators that comprise the index on Impartial Administration:

1 attribute

- Impartial Administration

2 subattributes

- Absence of corruption
- Predictable enforcement

9 indicators

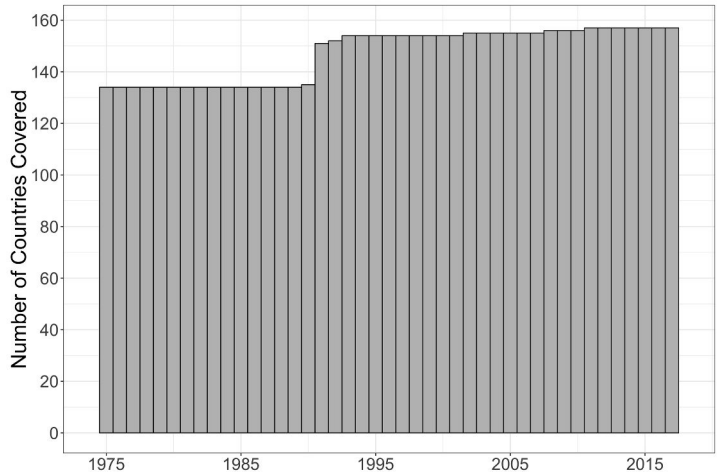

Attribute

Impartial Administration (C_A4)

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_A4																				
Definition	The government and the public administration more generally should implement official public policies in an impartial manner. If implementation is unfair and unpredictable, large discrepancies between official laws and policies, on the one hand, and practices, on the other, undermine democratic principles. Thus, democracy is a matter not only of access to power and control of power, but also of the exercise of power. Since Impartial Administration to a large extent overlaps with the concept of the rule of law, this attribute is also rooted in the tradition that emphasizes the liberal aspects of democracy. The two subattributes were aggregated into the Impartial Administration index using BFA.

Subattributes

Absence of corruption (C_SD41)

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_SD41																				
Definition	The absence of corruption subattribute denotes the extent to which the executive and the public administration, more broadly, do not abuse their office for personal gain. Four V-Dem indicators explicitly refer to corruption in the government broadly understood, i.e., the executive and public administration more generally (but excluding courts and parliaments). We make use of these and another expert-coded but broader indicator on government corruption from the ICRG data set. The five indicators have been aggregated into the absence of corruption subattribute using IRT.																				
Original scale	Interval																				
Citation	Skaaning (2018)																				
Data manipulation for aggregation	---																				
Indicator of	4. Impartial Administration																				
Indicator of	BFA of 4.1. absence of corruption and 4.2. predictable enforcement to create 4. Impartial Administration																				
Indicators included	V_41_01, V_41_02, V_41_03, V_41_04, V_41_05																				
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).

Predictable enforcement (C_SD42)

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_SD42																				
Definition	The predictable enforcement subattribute denotes the extent to which the executive and public officials enforce laws in a predictable manner. To measure predictable enforcement, three expert-coded V-Dem indicators were included: the executive's respect for constitutional provisions, the presence of transparent laws with predictable enforcement and rule-abidingness in the public sector. To these were added an indicator from the ICRG (also expert-coded) on the strength and expertise of the bureaucracy. The four indicators were aggregated into the predictable enforcement subattribute using IRT.

Indicators

Public sector corrupt exchanges (v_41_01)

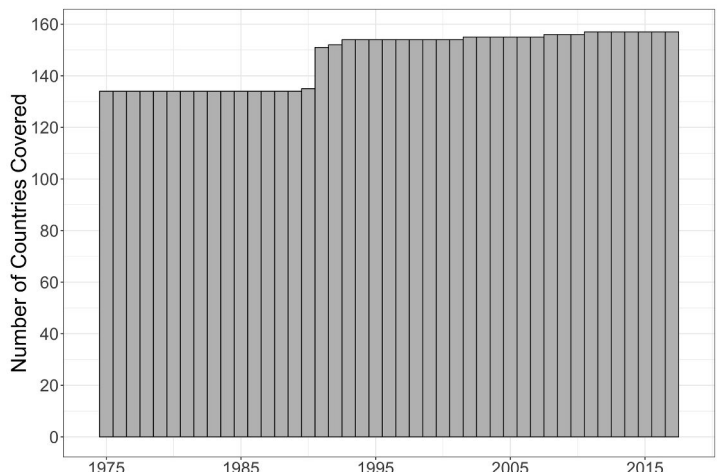

Data source	V-Dem																				
Original variable	v2excrptps																				
GSoD name	v_41_01																				
Definition	<p>Question: How routinely do public sector employees grant favours in exchange for bribes or other material inducements?</p> <p>Responses:</p> <p>0: Extremely common. Most public sector employees are systematically involved in petty but corrupt exchanges almost all the time.</p> <p>1: Common. Such petty but corrupt exchanges occur regularly involving a majority of public employees.</p> <p>2: Sometimes. About half or less than half of public sector employees engage in such exchanges for petty gains at times.</p> <p>3: Scattered. A small minority of public sector employees engage in petty corruption from time to time.</p> <p>4: No. Never, or hardly ever.</p> <p>Clarification: When responding to this question, think about a typical person employed in the public sector, excluding the military. If there are large discrepancies between branches of the public sector, between the national/federal and subnational/state level, or between the core bureaucracy and employees working in public service delivery, try to average them out before stating your response.</p>																				
Original scale	Ordinal, converted to interval by the measurement model.																				
Citation	Pemstein et al. (2018) Coppedge et al. (2018: 120)																				
Data manipulation for aggregation	Recoded into 20 categories, each containing five percentiles, ranging from 1 (the lowest five percentiles) to 20 (the highest five percentiles).																				
Indicator of	4. Impartial Administration 4.1. Absence of corruption																				
Indicator of	IRT to construct subattribute 4.1. Absence of corruption.

Corruption (v_41_05)

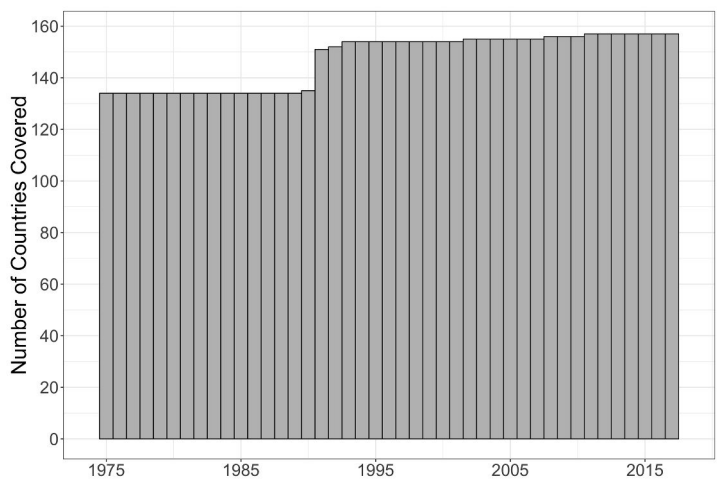

Data source	ICRG																																																																				
Original variable	F																																																																				
GSoD name	v_41_05																																																																				
Definition	This is an assessment of corruption within the political system. The most common form of corruption met directly by business is financial corruption in the form of demands for special payments and bribes connected with import and export licences, exchange controls, tax assessments, police protection or loans. Although this measure takes such corruption into account, it is more concerned with actual or potential corruption in the form of excessive patronage, nepotism, job reservations, 'favour-for-favours', secret party funding and suspiciously close ties between politics and business.																																																																				
Original scale	Ordinal																																																																				
Citation	Howell (2011: 4)																																																																				
Data manipulation for aggregation	---																																																																				
Indicator of	4. Impartial Administration 4.1. Absence of corruption																																																																				
Indicator of	IRT to construct subattribute 4.1. Absence of corruption.																																																																				
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).																																																																				
Coverage	 <p>The bar chart illustrates the number of countries covered by the Corruption (v_41_05) indicator over time. The y-axis represents the 'Number of Countries Covered' from 0 to 160. The x-axis represents years from 1975 to 2015. The data shows that the indicator was not used until 1984, when it covered 100 countries. From 1985 onwards, the number of countries covered generally increased, peaking at 130 in 2004 and remaining at that level until 2015.</p> <table border="1"> <thead> <tr> <th>Year</th> <th>Number of Countries Covered</th> </tr> </thead> <tbody> <tr><td>1975</td><td>0</td></tr> <tr><td>1984</td><td>100</td></tr> <tr><td>1985</td><td>115</td></tr> <tr><td>1986</td><td>118</td></tr> <tr><td>1987</td><td>118</td></tr> <tr><td>1988</td><td>118</td></tr> <tr><td>1989</td><td>120</td></tr> <tr><td>1990</td><td>118</td></tr> <tr><td>1991</td><td>120</td></tr> <tr><td>1992</td><td>120</td></tr> <tr><td>1993</td><td>120</td></tr> <tr><td>1994</td><td>120</td></tr> <tr><td>1995</td><td>120</td></tr> <tr><td>1996</td><td>120</td></tr> <tr><td>1997</td><td>122</td></tr> <tr><td>1998</td><td>130</td></tr> <tr><td>1999</td><td>130</td></tr> <tr><td>2000</td><td>130</td></tr> <tr><td>2001</td><td>130</td></tr> <tr><td>2002</td><td>130</td></tr> <tr><td>2003</td><td>130</td></tr> <tr><td>2004</td><td>130</td></tr> <tr><td>2005</td><td>130</td></tr> <tr><td>2006</td><td>130</td></tr> <tr><td>2007</td><td>130</td></tr> <tr><td>2008</td><td>130</td></tr> <tr><td>2009</td><td>130</td></tr> <tr><td>2010</td><td>130</td></tr> <tr><td>2011</td><td>130</td></tr> <tr><td>2012</td><td>130</td></tr> <tr><td>2013</td><td>130</td></tr> <tr><td>2014</td><td>130</td></tr> <tr><td>2015</td><td>130</td></tr> </tbody> </table>	Year	Number of Countries Covered	1975	0	1984	100	1985	115	1986	118	1987	118	1988	118	1989	120	1990	118	1991	120	1992	120	1993	120	1994	120	1995	120	1996	120	1997	122	1998	130	1999	130	2000	130	2001	130	2002	130	2003	130	2004	130	2005	130	2006	130	2007	130	2008	130	2009	130	2010	130	2011	130	2012	130	2013	130	2014	130	2015	130

Transparent laws with predictable enforcement (v_42_02)

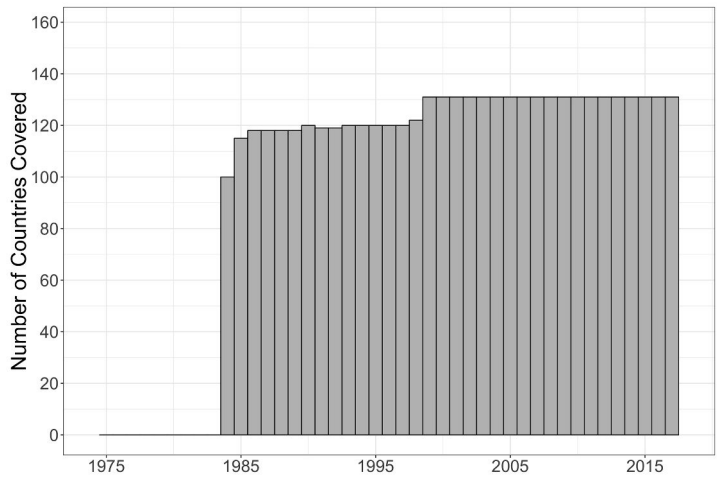

Data source	V-Dem																				
Original variable	v2cltrnslw																				
GSoD name	v_42_02																				
Definition	<p>Question: Are the laws of the land clear, well publicized, coherent (consistent with each other), relatively stable from year to year and enforced in a predictable manner?</p> <p>Responses:</p> <p>0: Transparency and predictability are almost non-existent. The laws of the land are created and/or enforced in completely arbitrary fashion.</p> <p>1: Transparency and predictability are severely limited. The laws of the land are more often than not created and/or enforced in arbitrary fashion.</p> <p>2: Transparency and predictability are somewhat limited. The laws of the land are mostly created in a non-arbitrary fashion but enforcement is rather arbitrary in some parts of the country.</p> <p>3: Transparency and predictability are fairly strong. The laws of the land are usually created and enforced in a non-arbitrary fashion.</p> <p>4: Transparency and predictability are very strong. The laws of the land are created and enforced in a non-arbitrary fashion.</p> <p>Clarification: This question focuses on the transparency and predictability of the laws of the land.</p>

Rigorous and impartial public administration (v_42_03)

Data source	V-Dem																				
Original variable	v2clrspt																				
GSoD name	v_42_03																				
Definition	<p>Question: Are public officials rigorous and impartial in the performance of their duties?</p> <p>Responses:</p> <p>0: The law is not respected by public officials. Arbitrary or biased administration of the law is rampant.</p> <p>1: The law is weakly respected by public officials. Arbitrary or biased administration of the law is widespread.</p> <p>2: The law is modestly respected by public officials. Arbitrary or biased administration of the law is moderate.</p> <p>3: The law is mostly respected by public officials. Arbitrary or biased administration of the law is limited.</p> <p>4: The law is generally fully respected by the public officials. Arbitrary or biased administration of the law is rare.</p> <p>Clarification: This question focuses on the extent to which public officials generally abide by the law and treat like cases alike; or, conversely, the extent to which public administration is characterized by arbitrariness and bias (i.e. nepotism, cronyism or discrimination). The question covers the public officials who handle the cases of ordinary people. If no functioning public administration exists, the lowest score (0) applies.</p>																				
Original scale	Ordinal, converted to interval by the measurement model.

Bureaucratic quality (v_42_04)

Data source	ICRG																																																																				
Original variable	L																																																																				
GSoD name	v_42_04																																																																				
Definition	The institutional strength and quality of the bureaucracy is another shock absorber that tends to minimize revisions of policy when governments change. Therefore, high points are given to countries where the bureaucracy has the strength and expertise to govern without drastic changes in policy or interruptions in government services. In these low-risk countries, the bureaucracy tends to be somewhat autonomous from political pressure and to have an established mechanism for recruitment and training. Countries that lack the cushioning effect of a strong bureaucracy receive low points because a change in government tends to be traumatic in terms of policy formulation and day-to-day administrative functions.

5. Participatory Engagement

Participatory Engagement represents the fifth of the five attributes of democracy developed by International IDEA's Global State of Democracy Indices.

This section of the Codebook offers details about the subattributes and indicators that comprise this attribute.

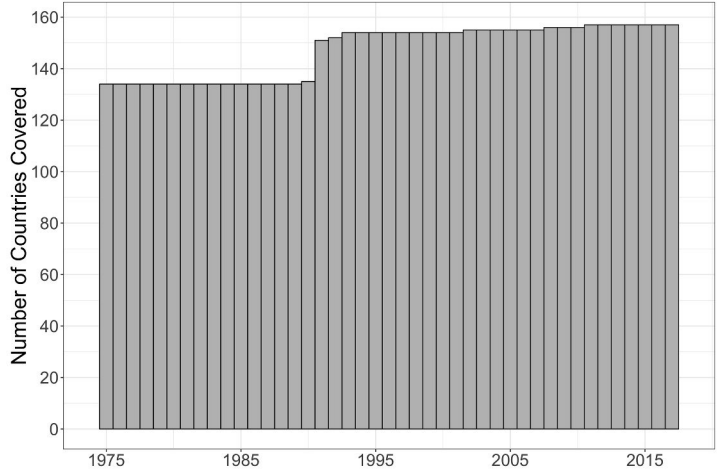

4 subattributes

- Civil society participation
- Electoral participation
- Direct democracy
- Sub-national elections

8 indicators

Subattributes

Civil society participation (C_SD51)

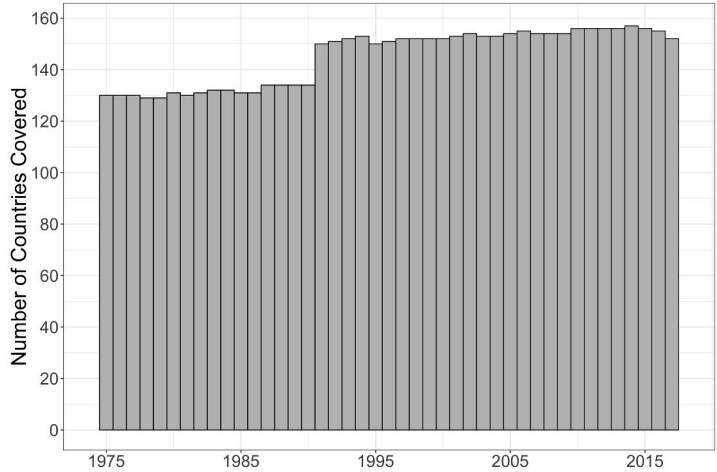

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_SD51																				
Definition	The measurement of civil society participation relies on three V-Dem indicators. They result from an expert survey and consider the extent to which the population is engaged in civil society activities. The three indicators on civil society participation clearly tapped into a common dimension and were aggregated into an index using BFA.																				
Original scale	Interval																				
Citation	Skaaning (2018)																				
Data manipulation for aggregation	---																				
Indicator of	---																				
Aggregation	---																				
Indicators included	V_51_01, V_51_02, V_51_02																				
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).																				
Auxiliary variables	L_SD51 = lower bound for the 68% confidence interval U_SD51 = upper bound for the 68% confidence interval																				
Coverage	 <table border="1"> <caption>Approximate data for Civil Society Participation Coverage</caption> <thead> <tr> <th>Year</th> <th>Number of Countries Covered</th> </tr> </thead> <tbody> <tr><td>1975</td><td>135</td></tr> <tr><td>1980</td><td>135</td></tr> <tr><td>1985</td><td>135</td></tr> <tr><td>1990</td><td>135</td></tr> <tr><td>1995</td><td>155</td></tr> <tr><td>2000</td><td>155</td></tr> <tr><td>2005</td><td>155</td></tr> <tr><td>2010</td><td>155</td></tr> <tr><td>2015</td><td>155</td></tr> </tbody> </table>	Year	Number of Countries Covered	1975	135	1980	135	1985	135	1990	135	1995	155	2000	155	2005	155	2010	155	2015	155

2015	155																				

Direct Democracy (C_SD53)

Data source	GSoD Indices																				
Original variable	Constructed variable																				
GSoD name	C_SD53																				
Definition	V-Dem offers the only comprehensive data set in the form of the direct democracy index developed by David Altman (2016). It is based on observable variables on the formal opportunities for and actual use of different instruments of direct democracy at the national level. However, it seems pertinent to take into account whether mechanisms of direct democracy are available and used in a context where elections are generally respected as the main source of political power. To do so, the electoral indicator from BRRD is also used here.																				
Original scale	Interval																				
Citation	Skaaning (2018)																				
Data manipulation for aggregation	---																				
Indicator of	---																				
Aggregation	Multiplication of the two variables																				
Indicators included	V_53_01, V_53_02																				
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).																				
Auxiliary variables	L_SD51 = lower bound for the 68% confidence interval U_SD51 = upper bound for the 68% confidence interval																				
Coverage	<table border="1"> <caption>Approximate data for Coverage Chart</caption> <thead> <tr> <th>Year</th> <th>Number of Countries Covered</th> </tr> </thead> <tbody> <tr><td>1975</td><td>130</td></tr> <tr><td>1980</td><td>130</td></tr> <tr><td>1985</td><td>130</td></tr> <tr><td>1990</td><td>150</td></tr> <tr><td>1995</td><td>150</td></tr> <tr><td>2000</td><td>150</td></tr> <tr><td>2005</td><td>150</td></tr> <tr><td>2010</td><td>150</td></tr> <tr><td>2015</td><td>150</td></tr> </tbody> </table>	Year	Number of Countries Covered	1975	130	1980	130	1985	130	1990	150	1995	150	2000	150	2005	150	2010	150	2015	150

2005	150																				
2010	150																				
2015	150																				

Local Democracy (C_SD54)

Data source	GSoD Indices
Original variable	Constructed variable
GSoD name	C_SD54
Definition	V-Dem is also the only provider of a comprehensive, cross-national data set on subnational elections. The local government index indicates whether the local government is elected and whether it is empowered in relation to the central government, while another indicator assesses the freedom and fairness of subnational elections.
Original scale	Interval
Citation	Skaaning (2018)
Data manipulation for aggregation	---
Indicator of	---
Aggregation	Multiplication of the two variables
Indicators included	V_54_01, V_54_02
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).
Auxiliary variables	L_SD51 = lower bound for the 68% confidence interval U_SD51 = upper bound for the 68% confidence interval
Coverage	 <p>The bar chart illustrates the growth in the number of countries covered by the Local Democracy index over time. The vertical axis represents the 'Number of Countries Covered' from 0 to 160. The horizontal axis represents years from 1975 to 2015. The data shows a steady increase in coverage, starting at approximately 130 countries in 1975 and reaching about 155 countries by 2015. There is a noticeable jump in coverage around 1990, where it increases from about 135 to 150 countries.</p>

Indicators

CSO participatory environment (v_51_01)

Data source	V-Dem																				
Original variable	v2csptrcpt																				
GSoD name	v_51_01																				
Definition	<p>Question: Which of these best describes the involvement of people in civil society organizations (CSOs)?</p> <p>Responses:</p> <p>0: Most associations are state-sponsored and although a large number of people may be active in them, their participation is not purely voluntary.</p> <p>1: Voluntary CSOs exist but few people are active in them.</p> <p>2: There are many diverse CSOs, but popular involvement is minimal.</p> <p>3: There are many diverse CSOs and it is considered normal for people to be at least occasionally active in at least one of them.</p>																				
Original scale	Ordinal, converted to interval by the measurement model.																				
Citation	Pemstein et al. (2018) Coppedge et al. (2018: 177)																				
Data manipulation for aggregation	---																				
Indicator of	5.1. Civil society participation																				
Aggregation	BFA to construct subattribute 5.1. civil society participation.																				
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).																				
Coverage	<table border="1"> <caption>Approximate data for Coverage Chart</caption> <thead> <tr> <th>Year</th> <th>Number of Countries Covered</th> </tr> </thead> <tbody> <tr><td>1975</td><td>135</td></tr> <tr><td>1980</td><td>135</td></tr> <tr><td>1985</td><td>135</td></tr> <tr><td>1990</td><td>135</td></tr> <tr><td>1995</td><td>155</td></tr> <tr><td>2000</td><td>155</td></tr> <tr><td>2005</td><td>155</td></tr> <tr><td>2010</td><td>155</td></tr> <tr><td>2015</td><td>155</td></tr> </tbody> </table>	Year	Number of Countries Covered	1975	135	1980	135	1985	135	1990	135	1995	155	2000	155	2005	155	2010	155	2015	155

Engaged society (v_51_02)

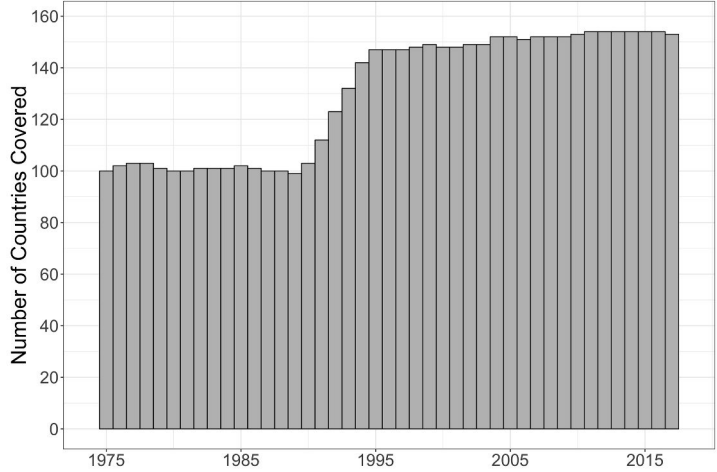

Data source	V-Dem																				
Original variable	v2dlengage																				
GSoD name	v_51_02																				
Definition	<p>Question: When important policy changes are being considered, how wide and how independent are public deliberations?</p> <p>Responses:</p> <p>0: Public deliberation is never, or almost never, allowed.</p> <p>1: Some limited public deliberations are allowed but the public below the elite level is almost always either unaware of major policy debates or unable to take part in them.</p> <p>2: Public deliberation is not repressed but infrequent; and non-elite actors are typically controlled and/or constrained by the elites.</p> <p>3: Public deliberation is actively encouraged and some autonomous non-elite groups participate, but it is confined to a small slice of specialized groups that tend to be the same across issue-areas.</p> <p>4: Public deliberation is actively encouraged and a relatively broad segment of non-elite groups often participate; these vary with different issue-areas.</p> <p>5: Large numbers of non-elite groups as well as ordinary people tend to discuss major policies among themselves, in the media, in associations or neighbourhoods and in the streets. Grassroots deliberation is common and unconstrained.</p> <p>Clarification: This question refers to deliberation as manifest in discussion, debate and other public forums such as popular media.</p>

CSO participatory environment (v_51_03)

Data source	V-Dem																				
Original variable	v2cscnsult																				
GSoD name	v_51_03																				
Definition	<p>Question: Are major civil society organizations (CSOs) routinely consulted by policymakers on policies relevant to their members?</p> <p>Responses:</p> <p>0: No. There is a high degree of insulation of the government from CSO input. The government may sometimes enlist or mobilize CSOs after policies are adopted to sell them to the public at large. But it does not often consult with them in formulating policies.</p> <p>1: To some degree. CSOs are but one set of voices that policymakers sometimes take into account.</p> <p>2: Yes. Important CSOs are recognized as stakeholders in important policy areas and given voice on such issues. This can be accomplished through formal corporatist arrangements or through less formal arrangements.</p>

Electoral participation (v_52_01)

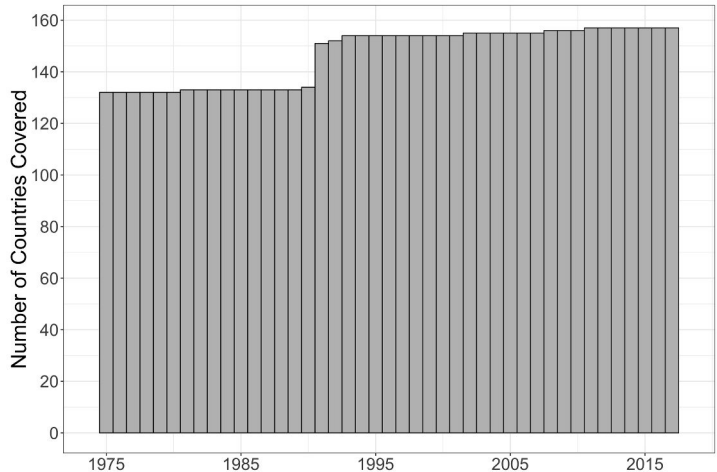

Data source	V-Dem
Original variable	v2elvaptrn
GSoD name	v_52_01
Definition	<p>Question: According to official results, what percentage (%) of the adult voting age population (VAP) cast a vote in this national election?</p> <p>Responses: Percentage</p> <p>Clarification: The VAP can reflect irregularities such as problems with the voters' register or registration system. VAP numbers are estimates since they do not take into account legal or systemic barriers to the exercise of the franchise or account for non-eligible members of the population. Thus, VAP values can surpass 100, which is not an error but reflects such conditions.</p>
Original scale	Interval
Citation	Coppedge et al. (2018: 85)
Data manipulation for aggregation	Repeated within elections: values for non-election years are copied from the previous election year. Coded as 0 if the electoral regime (v2x_elecreg from V-Dem) is coded as 0, indicating the absence of regularly scheduled elections as stipulated by election law or established precedent. A small number of cases had values higher than 100. For each of these cases the International IDEA Voter turnout database was checked and these were coded as either 100 (if voter turnout in the surrounding elections was close to 100%) or missing (if voter turnout in the surrounding elections was not close to 100%).
Indicator of	—
Aggregation	—
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).
Coverage	 <p>The bar chart illustrates the number of countries covered by the Electoral participation indicator (v_52_01) over time. The vertical axis represents the 'Number of Countries Covered' from 0 to 160 in increments of 20. The horizontal axis represents years from 1975 to 2015 in 10-year increments. The data shows a period of relative stability between 1975 and 1985, with coverage fluctuating around 100 countries. From the late 1980s onwards, there is a significant and consistent upward trend, with the number of countries covered reaching approximately 155 by 2015.</p>

Direct democracy (v_53_01)

Data source	V-Dem																				
Original variable	v2xdd_dd																				
GSoD name	v_53_01																				
Definition	<p>Question: To what extent are direct popular votes utilized?</p> <p>Clarification: Direct popular votes are institutionalized processes by which citizens of a region or country register their choice or opinion on specific issues through a ballot. The term is intended to embrace initiatives, referendums and plebiscites, as they are usually understood. It captures some aspects of the more general concept of direct democracy. The term does not encompass recall elections, deliberative assemblies or settings in which the vote is not secret or the purview is restricted. Similarly, it does not apply to elections for representatives.</p>

Electoral (v_53_02)

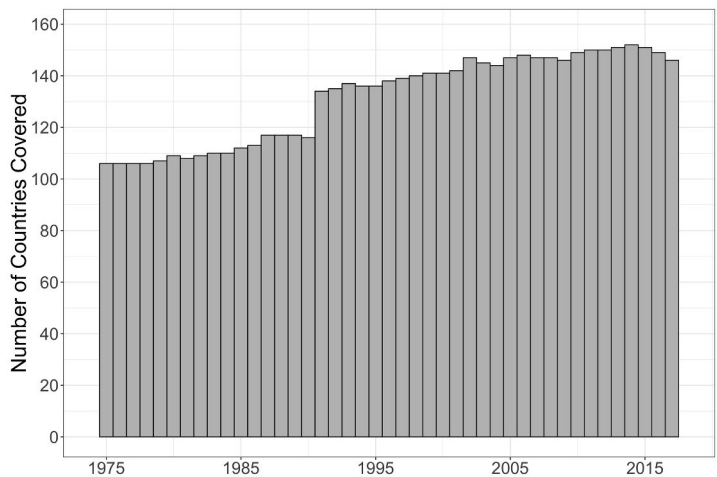

Data source	BRRD																				
Original variable	Electoral																				
GSoD name	v_53_02																				
Definition	Does a country have no regular elections, elections in an effectively one- party state, elections with opposition parties but without an actual chance of government change, or full democracy? Alternative democracy indicator capturing degree of multi-party competition (No elections=0, Single-party elections=1, non-democratic multi-party elections=2, democratic elections= 3).																				
Original scale	Ordinal																				
Citation	Bjørnskov and Rode (2018)																				
Data manipulation for aggregation	---																				
Indicator of	5.3. Direct Democracy																				
Aggregation	Multiplication with v_53_02																				
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).																				
Coverage	 <p>The bar chart illustrates the number of countries covered by the Electoral (v_53_02) indicator over time. The vertical axis represents the 'Number of Countries Covered' from 0 to 160 in increments of 20. The horizontal axis represents years from 1975 to 2015 in 10-year increments. The data shows a steady increase from approximately 130 countries in 1975 to about 150 countries by 1990, after which the number of countries covered remains relatively constant at around 150 through 2015.</p> <table border="1"> <caption>Approximate data for Electoral (v_53_02) Coverage</caption> <thead> <tr> <th>Year</th> <th>Number of Countries Covered</th> </tr> </thead> <tbody> <tr><td>1975</td><td>130</td></tr> <tr><td>1980</td><td>130</td></tr> <tr><td>1985</td><td>130</td></tr> <tr><td>1990</td><td>150</td></tr> <tr><td>1995</td><td>150</td></tr> <tr><td>2000</td><td>150</td></tr> <tr><td>2005</td><td>150</td></tr> <tr><td>2010</td><td>150</td></tr> <tr><td>2015</td><td>150</td></tr> </tbody> </table>	Year	Number of Countries Covered	1975	130	1980	130	1985	130	1990	150	1995	150	2000	150	2005	150	2010	150	2015	150

Local government index (v_54_01)

Data source	V-Dem																				
Original variable	v2xel_locelec																				
GSoD name	v_54_01																				
Definition	<p>Question: Are there elected local governments, and — if so — to what extent can they operate without interference from unelected bodies at the local level?</p> <p>Clarification: The lowest score would be reserved for a country that has no elected local governments. A medium score would be accorded a country that has elected local governments but where those governments are subordinate to unelected officials at the local level perhaps appointed by a higher-level body. A high score would be accorded to a country in which local governments are elected and able to operate without restrictions from unelected actors at the local level with the exception of judicial bodies. Naturally, local governments remain subordinate to the regional and national governments.</p>																				
Original scale	Interval																				
Citation	Coppedge et al. (2018: 48)																				
Data manipulation for aggregation	—																				
Indicator of	5.4. Subnational elections																				
Aggregation	Multiplication with v_54_02																				
Final scale	Scaled to range from 0 (lowest score) to 1 (highest score).																				
Coverage	<table border="1"> <caption>Approximate data for Local government index coverage (Number of Countries Covered)</caption> <thead> <tr> <th>Year</th> <th>Number of Countries Covered</th> </tr> </thead> <tbody> <tr><td>1975</td><td>125</td></tr> <tr><td>1980</td><td>125</td></tr> <tr><td>1985</td><td>125</td></tr> <tr><td>1990</td><td>128</td></tr> <tr><td>1995</td><td>150</td></tr> <tr><td>2000</td><td>150</td></tr> <tr><td>2005</td><td>152</td></tr> <tr><td>2010</td><td>155</td></tr> <tr><td>2015</td><td>150</td></tr> </tbody> </table>	Year	Number of Countries Covered	1975	125	1980	125	1985	125	1990	128	1995	150	2000	150	2005	152	2010	155	2015	150

Subnational elections free and fair (v_54_02)

Data source	V-Dem																				
Original variable	v2elffelr																				
GSoD name	v_54_02																				
Definition	<p>Question: Taking all aspects of the pre-election period, election day and the post-election process into account, would you consider subnational elections (regional and local, as previously identified) to be free and fair on average?</p> <p>Responses:</p> <p>0: No, not at all. The elections were fundamentally flawed and the official results had little if anything to do with the 'will of the people' (who won office).</p> <p>1: Not really. While the elections allowed for some competition, the irregularities in the end affected the outcome of the elections (who won office).</p> <p>2: Ambiguous. There was substantial competition and freedom of participation but there were also significant irregularities. It is hard to determine whether the irregularities affected the outcome (who won office).</p> <p>3: Yes, somewhat. There were deficiencies and some degree of fraud and irregularity but these did not in the end affect the outcome (who won office).</p> <p>4: Yes. There were a certain amount of human error and logistical restrictions but these were largely unintentional and without significant consequences.</p> <p>Clarification: This question refers to subnational levels that have elected offices and elections. It does not refer to subnational levels without elected offices and elections. 'Free and fair' refers to all aspects of the election process except the extent of suffrage (by law). Thus, a free and fair election may occur even if the law excludes significant groups (which is measured separately).</p>																				
Original scale	Ordinal, converted to interval by the measurement model.

About the author

Claudiu D. Tufis is an Associate Professor at the Faculty of Political Science at the University of Bucharest, where he teaches quantitative methodology, civil society, social movements and democratization. He holds a master's degree in Sociology (Central European University) and a PhD in political science (Pennsylvania State University). He is a founding member of the Centre for International Cooperation and Development Studies (IDC) at the University of Bucharest, a founding member of the Romanian Quantitative Studies Association (RQSA), and a member of the Romanian Group for the Study of Social Values.

About International IDEA

The International Institute for Democracy and Electoral Assistance (International IDEA) is an intergovernmental organization with the mission to advance democracy worldwide, as a universal human aspiration and enabler of sustainable development. We do this by supporting the building, strengthening and safeguarding of democratic political institutions and processes at all levels. Our vision is a world in which democratic processes, actors and institutions are inclusive and accountable and deliver sustainable development to all.

What do we do?

In our work we focus on three main impact areas: electoral processes; constitution-building processes; and political participation and representation. The themes of gender and inclusion, conflict sensitivity and sustainable development are mainstreamed across all our areas of work.

International IDEA provides analyses of global and regional democratic trends; produces comparative knowledge on good international democratic practices; offers technical assistance and capacity-building on democratic reform to actors engaged in democratic processes; and convenes dialogue on issues relevant to the public debate on democracy and democracy building.

Where do we work?

Our headquarters is located in Stockholm, and we have regional and country offices in Africa, the Asia-Pacific, Europe, and Latin America and the Caribbean. International IDEA is a Permanent Observer to the United Nations and is accredited to European Union institutions.

<<http://idea.int>>

The Global State of Democracy is a biennial report that aims to provide policymakers with an evidence-based analysis of the state of global democracy, supported by the Global State of Democracy Indices (GSoD Indices), in order to inform policy interventions and identify problem-solving approaches to trends affecting the quality of democracy around the world.

The first edition of the report explored the conditions under which democracy can be resilient and how to strengthen its capacity as a system to overcome challenges and threats.

This document presents revised and updated information about all the variables included in the GSoD indices data set that enabled the construction of Version 2 of the GSoD Indices, which depicts democratic trends at the country, regional and global levels across a broad range of different attributes of democracy in the period 1975–2017.

The data underlying the GSoD Indices is based on a total of 97 indicators developed by various scholars and organizations using different types of source, including expert surveys, standards-based coding by research groups and analysts, observational data and composite measures.
